AN UNLISTED MONUMENT OF THE FIFTEENTH CENTURY: THE DOME OF $Z\bar{A}WIYAT$ $AL\text{-}DAMIRD\bar{A}\dot{S}$

(followed by: Leonor Fernandes, The Zāwiya in Cairo)

Doris BEHRENS-ABOUSEIF

The Damirdāšiyya, one of the great Sufi orders of Egypt, is a branch of the Ḥalwatiyya, which originated in Azerbayjān, whence it spread to Anatolia and the Arab provinces of the Ottoman Empire, reaching Egypt in the fifteenth century through three disciples of the Ḥalwatī šaiḥ 'Umar Rawšānī (1).

- 1 Ibrāhīm al-Kulšānī, a Turk from Diyār Bakir who took refuge in Egypt after the Safavid conquest of Tabriz. He was received by Sultan al-Ġūrī in 1507, and after the Ottoman conquest became popular among the soldiers of the Turkish army. He established a $z\bar{a}wiya$ outside Bāb Zuwayla (Index N° 322) (2).
- 2 Šaih Šāhīn 'Abd Allāh al-Šarkasī al-Muḥammadī, known as Šāhīn al-Ḥalwatī, a Mamluk of Qāyṭbāy converted to Sufism, closely related in his career to Damirdāš. He founded a zāwiya at the foot of the Muqaṭṭam hill, where he died in 1547 (3).
- 3 Šaiḥ 'Abd Allāh Šams al-Dīn Damirdāš al-Muḥammadī, also a Mamluk of Qāyṭbāy, the son of a Naqšabandī šaiḥ in Tabriz, captured at the age of fifteen and brought to Egypt soon after. The byname al-Muḥammadī shared with Šāhīn al-Šarkasī, confirms both careers as Mamluk. (Ša'rānī does not mention Damirdāš as a Mamluk, but his other biographers do).

From Egypt Damirdāš went, or was sent back, to Tabriz. There, he and Šāhīn met 'Umar Rawšānī, who initiated them into Sufism and sent them back again to Cairo,

where Damirdāš is reported to have received permission from Sultan Qāyṭbāy to cultivate an orchard in the northern suburb of the city, Ḥandaq al-Mawālī, today 'Abbāsiyya, and establish there a $z\bar{a}wiya$ (1). Šaiḥ Ibrāhīm al-Madbūlī advised him to rely only upon his own work to maintain his $z\bar{a}wiya$ and support himself; within five years Damirdāš and his wife are reported to have grown as many as one thousand palm trees, the fruits of his orchard becoming famous all over Cairo for their good quality. Until two decades ago, when the Egyptian government sequestrated their property, the wealth subsequently accumulated by the Damirdāšiyya order was legendary. The biographers of Šaiḥ Damirdāš report that he divided the income of his orchard into three equal parts: one third to be spent on the poors, one third for the sufis of the $z\bar{a}wiya$, and a third for his own family and descendants. This information is confirmed by several waqf documents of the Damirdāš order, though the original foundation waqf has not survived (2).

According to Bannerth, who studied the history, dogma, and ritual of the Damirdāšiyya order, the connection between Damirdāš, Qāyṭbāy, and 'Umar Rawšānī must have had a political background: Rawšānī was a partisan of Uzun Ḥasan, ruler of the Aq Koyunlu kingdom, with whom Qāyṭbāy entertained friendly relations in an attempt to build an axis against the Ottomans (3). Originally a Šāfi'ī, Šaiḥ Damirdāš is reported to have changed to the Ḥanafī rite after the Ottoman conquest of Egypt. Sultan Selim is reported to have paid a visit to him in his zāwiya while on an excursion to the balsam garden of Maṭariyya (4). Damirdāš died in 930/1523.

THE DOME

The zāwiya founded by Šaiḥ Damirdāš is known as Ğāmi' al-Muḥammadī and stands in the suburb of 'Abbāsiyya. It consists of a modern mosque built around the original zāwiya dome, which is not included within the official list of the Islamic monuments of Cairo, although there can be no doubt that it is the construction built by Šaiḥ Damirdāš himself in the late fifteenth century. Archeological analysis, as will be demonstrated, confirms the historic data, which assign the foundation of the zāwiya specifically to the reign of the Sultan al-Ašraf Qāyṭbāy (1468-96).

⁽²⁾ Waqf Hasan Bāšā Halīfa al-Ruznāma, Maḥkamat Miṣr, 20 Ğumādā I 1105 H., nº 28/7, copy dated 15 Raǧab 1295 H. Awqāf/Siǧillāt 4902/2.

⁽³⁾ Bannerth, Sonderbrauch, p. 118.

⁽⁴⁾ Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr*. 2nd ed. Muḥ. Muṣṭafā, Cairo-Wiesbaden 1963, V, p. 188.

The dome is surrounded on all sides by the walls of the modern mosque, so that it is best visible from the roof of the mosque itself (Pl. XI, A). It is a plain brick construction resting on a square base of stone. Its architecture differs totally from that of other fifteenth century Cairene domes. With three exceptions, all other extent Mamluk domes are funerary structures and are usually slender constructions in brick or stone, with the high transitional zones typical of Mamluk architecture (1), resting on pendentives decorated with stalactite carving.

The Damirdāš dome lacks the high transitional zone and rests, not on pendentives, but on trilobe squinches set immediately within the square. These features link it with these exceptions, three other domes built during the fifteenth century, none of which belongs to the category of funeral dome architecture (2) (Pl. XI, B & XII).

The earliest of the three domes is that of Ma'bad al-Rifā'ī, built by Sultan al-Ašraf Barsbāy around 1433 and restored during the reign of Qāyṭbāy in 1478. It is located opposite the mausoleum of Barsbāy in the northern cemetery.

The two other domes were both built by Amir Yašbak min Mahdī al-Dawādār, an Amir of Qāyṭbāy, in 1477 and 1479. The first and smaller dome was built south of Maṭariyya in the quarter now called Qubba as part of a large residential and religious complex of which only the dome has survived. The second and larger dome, known today as Qubbat al-Fadāwiyya, was erected between Ḥusayniyya and Raydāniyya — today's 'Abbāsiyya — very close to the place where Damirdāš later established his own zāwiya. This dome was also part of a large residential complex of which it is the only structure to have survived.

The domes of Yašbak and Maʿbad al-Rifāʿī all consist of a brick dome resting on squinches each composed of an arch including another trilobe arch. The squinch starts immediately within the square part of the building without a pronounced transitional zone. The squinches at the Damirdāš dome show only a slight difference from these squinches in that they lack the outer arch and consist only of a semi-dome resting above two side arches which form a trilobe. This type of squinch has its origins in the groin-vaulted portals of Circassian Mamluk buildings, which appear for the first time during the reign of Sultan Barsbāy.

The proportions and silhouette of the Damirdāš dome are very similar to the smaller dome of Yašbak as can be seen on an old photograph by Ḥasan ʿAbd al-Wahhāb, taken

(1) Alī Ibrāhīm, Layla. «The transitional zone of domes in Cairene architecture». Kunst des Orients X 1/2, pp. 5-23.

(2) Behrens-Abouseif, Doris. «Four domes of the late Mamluk period». *Annales Islamologiques*. 1982 (17), pp. 191-201.

before its outer shape was altered ⁽¹⁾. Both buildings are of nearly the same size. The Damirdāš dome did not preserve any original inscription or decoration. Like other domes of the same period, its drum is pierced with pointed arched windows alternating with blind arches.

The Damirdāš is not merely similar in its architecture to the dome of Ma'bad al-Rifā'ī and the domes of Yašbak, but also shares a functional feature with all three of them: none was built as a mausoleum: all can be related to Sufi use.

The dome of Ma'bad al-Rifā'ī is mentioned in the waqf deed of Sultan Barsbāy as a $z\bar{a}wiya$ built for the Rifā'ī order ⁽²⁾; the dome of Yašbak south of Maṭariyya is mentioned in connection with Sufi ritual by Ibn Iyās ⁽³⁾; and the Fadāwiyya dome is described by Evliyā Čelebī as connected with a number of Sufi dwellings being used in his time, the seventeenth century, by the Aḥmadiyya order ⁽⁴⁾. The Damirdāš dome is likewise mentioned in the sources as a $z\bar{a}wiya$ and the fact that its founder was buried within its walls does not imply that it was built as a mausoleum. In fact, the cenotaph of Šaiḥ Damirdāš is not located in the center of the chamber, but in its southeastern corner, leaving the large room to be used for other purposes.

Since Damirdāš died in 1523, its construction must be of an earlier date. As has been demonstrated, the architecture of the dome of $Z\bar{a}$ wiyat al-Damirdāš relates it to a style of $z\bar{a}$ wiya architecture of the fifteenth century, particularly to the domes of Yašbak, built during the reign of Qāyṭbāy. Since the documentary sources also connect the career of Šaih Damirdāš in Egypt with the reign of this sultan, the $z\bar{a}$ wiya dome is most likely to have been erected sometime before the death of Qāyṭbāy i.e. before 1498.

THE HALWA AND THE CELLS

The Halwatiyya order ⁽⁵⁾, from which the Damirdāšiyya derives, is so named after the term *halwa* or retreat, a Sufi exercise adopted originally by most of the orders and traditionally traced back to the Prophet's seclusion in the cave of Ḥirā'. During the retreat the novice is supposed to stay in a dark room in order to promote a spiritual state of being through prayer, *dikr*, and meditation, remote from society.

The Damirdāšiyya has preserved the *halwa* ritual, it takes place during three days in the middle of the month of Šaʻbān, just before the *mawlid* of Šaih Damirdāš. The present mosque of the Damirdāšiyya or Ğāmiʻ al-Muḥammadī, therefore, contains a number of cells, large enough to allow one person to lie on its floor, and quite different from the cells of the *hanqāh*(s) built as lodging for the Sufis. Though most of the cells now existing are part of the modern construction added at the turn of the century, there are a number of cells located within the walls of the square on which the dome of the *zāwiya* rests, which must thus be contemporary with its construction. They present an arrangement unique in Cairene architecture.

As the plan of the dome shows $^{(1)}$, the walls of the square chamber are pierced on all sides by arches, three on each side, except for the *qibla* wall, where the prayer niche occupies the central part. As the walls of the chamber are quite thick, each arch covers an area of approximately 2 m^2 . In three walls, above each arch, between its apex and the summit of the square part of the building i.e. in the mezzanine, there is a small room covering as much space as the arch below. Each cell has a small window overlooking the $z\bar{a}wiya$. The northwestern wall has a different arrangement: the arched openings have been replaced by three high door openings connecting the dome with the modern part of the mosque. On this side there are no cells, although at the northwestern corner a space as large as half a cell is included within the northern wall and may have been originally part of a cell a part of which disappeared when the large door openings were pierced. Most probably the present door openings were heightened during the course of the modernization of the mosque. In this case, there may originally have been at least two more cells on this side, perhaps three if the central entrance was not higher than the rest of the arches.

The cells located within the northeastern and southwestern wall of the $z\bar{a}wiya$ can be reached by a staircase on each side which leads to a wooden gallery running along the cells and onto which the cells doors open. This gallery, which must be modern, also leads to another group of cells of more recent construction located outside the dome (Pl. XIII, A-B).

As it looks today the dome contains eight cells within its walls. If the northwestern wall had a mezzanine, they may have been ten or eleven. This number would be almost doubled if cells also existed at the groundfloor level i.e. underneath the arches. Nor can it be excluded that this space within the arches was originally used for cells, since the presence of arches could be used for cells if the arches were on both sides walled up, with a door on the backside and a window on the dome side as in the mezzanine. There, a

(1) Surveyed by Dr. Adel Yassin (fig. 1, 2, 3 and 4).

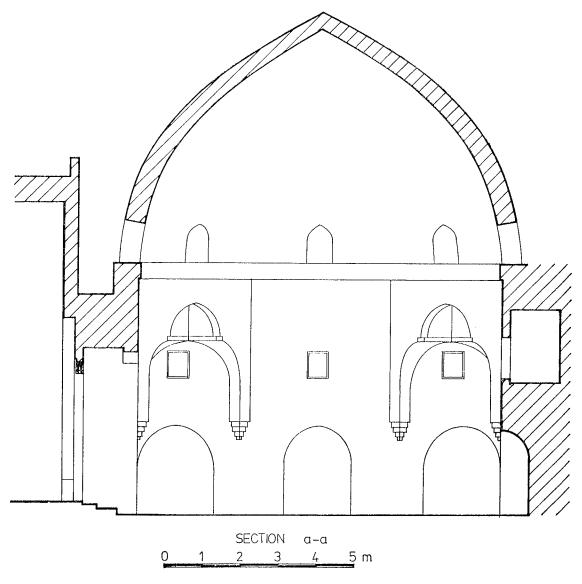

Fig. 1. — Section of the Damirdas dome.

person, could find enough room to lie as in the cells of the mezzanine, which occupy an equal space. In any case the presence of the cells within the walls of the Damirdāš dome strengthens the argument that the dome was conceived as a $z\bar{a}wiya$ and not as a mausoleum.

One of the most interesting features about the dome of Zāwiyat al-Damirdāš, is that it demonstrates the close connection between design and function, which implies that the founder of the building must have given specific guidelines to the architect in charge of the construction.

The Damirdāš is the only example of a Mamluk dome to present such an arrangement of cells for the halwa exercise. Since the ritual was practiced by almost all sufi orders, the question arises: where did the Sufis in $hanq\bar{a}h(s)$ or $z\bar{a}wiya(s)$ usually practice the halwa? The great $hanq\bar{a}h(s)$ like those of Barqūq, Īnāl and Qurqumās have enough rooms which could have fulfilled the requirement of the halwa.

The waqf documents, though, do not mention the balwa as far as sufi rituals in $banq\bar{a}h(s)$ are concerned, so that it is not quite evident if it was practiced by the $banq\bar{a}h(s)$ community (1). As for the $z\bar{a}wiya(s)$, almost nothing is known about their architectural development in Cairo.

The mosque of al-Ğuyūšī on the Muqaṭṭam, built by the Fatimid vizir Badr al-Ğamālī in 1085, has on its roof small domed structures that look like kiosks, large enough to allow one person to stand. Each of these structures has a prayer niche on its qibla side. Were it not for the prayer niches one would assume, with Farīd Shāfiʿī, that they were meant to shelter a guard, the whole building being a disguised watch tower (2). But the presence of the prayer niches in each of the domed kiosks suggests that they were perhaps built for the halwa; using the roofs of the mosques for retreat and meditation is a sufi tradition recorded in sufi biographies (3).

Basements as well can fulfill the same function: Šaih Šams al-Dīn al-Ḥanafī, who died in 847/1443, is mentioned as having retreated several years in a cell beneath the floor of his $z\bar{a}wiya^{(4)}$. Šaih Abū 'l-Saʿūd al-Ğarhī likewise used to practice his halwa in the sirdāb or basement of his $z\bar{a}wiya^{(5)}$.

The complex of Ibrāhīm al-Kulšānī, contemporary with that of Damirdāš, also a Ḥalwatī institution, shows a plan totally different from that of Zāwiyat al-Damirdāš. The historic sources call it a zāwiya, 'Alī Mubārak designates it as a takiyya, while the Damirdāš foundation is always referred to as a zāwiya both in historic sources as well as in waqf documents. Takiyyat al-Kulšānī is built around an elevated constructed esplanade which can be reached by two flights of about twenty steps altogether. A mausoleum dome stands in the center of the esplanade, surrounded on three sides,

⁽¹⁾ This was pointed out to me by Dr. Leonor Fernandes who has worked on the *hanqah* in fifteenth century *waqf* documents.

⁽²⁾ Shāfi'ī, Farīd. «The Mashhad al-Juyūshī: Archeological notes and studies». Studies in Islamic Art and Architecture in Honor of Professor K.A.C. Creswell. Cairo 1965, pp. 237-252, p. 251.

⁽³⁾ The Sufis of the Suṭūḥiyya order (saṭḥ = roof; pl. suṭūḥ) used to hold their meditations on the roof of buildings, like Aḥmad al-Badawī. Ša'rānī, II, p. 184.

⁽⁴⁾ Mubārak, IV, p. 117.

⁽⁵⁾ Ša^rrānī, II, p. 117.

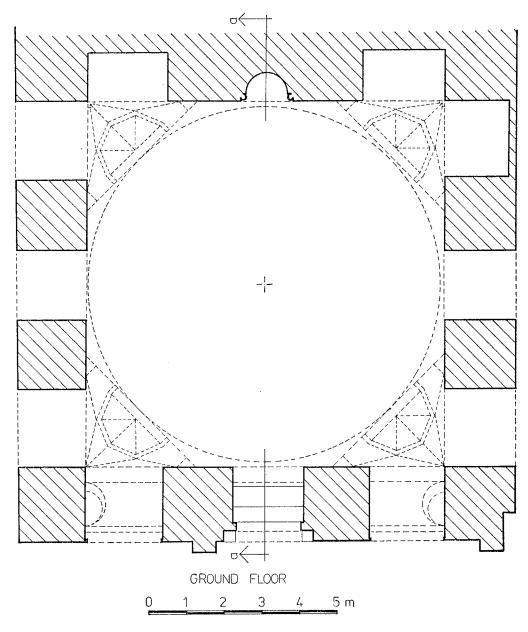

Fig. 2. — Ground plan of the Damirdāš dome.

according to the waqf, by Sufi dwellings. Today cells exist only on the eastern and western sides, those of the southern side having meanwhile disappeared. Between the esplanade and the street there is a twostoryed construction, its upper story is a vestibule which leads to the takiyya as well as to the masğid parallel to the street on the northern side of the esplanade. Underneath this vestibule, i.e. on street level, we see five small

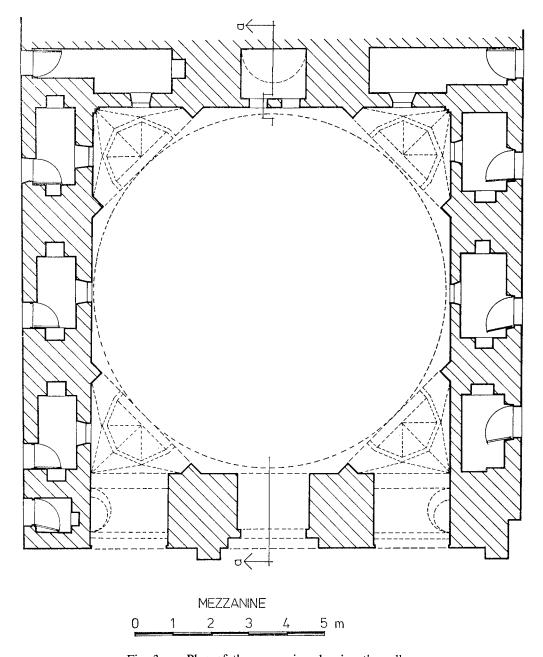

Fig. 3. — Plan of the mezzanine showing the cells.

cells of a similar size to the cells of the Damirdāš $z\bar{a}wiya$, arranged around a room used today as a shop. The five small cells must be balwa cells (1).

(1) Unfortunately the zāwiya and mosque of Šāhīn al-Ḥalwatī on the Muqaṭṭam is not accessible

at the moment, therefore I am not able to make a statement about the presence of *halwa* cells there.

Examples of *halwa* structures under the floor of a building are documented, as well, in fifteenth century Iran and Tunisia (1). Al-Zarakšī in his legal guidebook on the use of mosques mentions the $sird\bar{a}b$ of mosques as a possible place of worship (2).

As it seems the *halwa* could be practiced either on the top of a building or within its basement — the Damirdāš dome presents an additional device in this context — In a domed structure there is no roof available, but the basement provides darkness, which in the Damirdāš ritual — perhaps in other Sufi orders as well — is necessary for seclusion.

The references to *halwa* cells underneath the floor of religious buildings throw a light on the architecture of the domes of Yašbak mentioned above, both of which carry a feature so far not clarified. Both domes are elevated constructions, built high above street level, so that space is left between the street level and the floor of the domed chamber for a room of which the function has so far not been identified, though it certainly was not built as a tomb. As both domes were built as a kind of royal zāwiya within residential structures, we may not be wrong in attributing the function of the lower room to the *halwa*. In the case of the smaller dome, south of Matariyya, however, the lower room could not have been used during the season of the Nile flood: the building being located in a depression, the lower story would have been submerged during the three summer months.

None of the three domes compared with the dome of Zāwiyat al-Damirdāš — Maʿbad al-Rifāʿī and the two domes of Yašbak — includes the tomb of a šaiħ, they are all three royal or princely constructions, not connected in documentary sources with any particular šaiħ. The dome of Maʿbad al-Rifāʿī for example, is dedicated to a particular order, the Rifāʿiyya, but not to a person.

The dome of Damirdāš, however, was erected by a šaih for himself, for his own tarīqa, perhaps also at his own expense. This circumstance explains the presence of a tomb within the walls of the zāwiya. Other zāwiya(s) of the same period, however — those for instance, of 'Alī al-Ḥawāṣṣ, Šaʿrānī, Daṣṭūṭī, Abū'l-'Ilā, Šāhīn al-Ḥalwatī and

(1) In Irān, Masjid Chihil Sutūn, and Masjid i Gunbad at Ziyāratgāh near Herat, both XVth century constructions include *chillakhāna* or cells for the *halwa* exercise. At the Chihil Sutūn mosque they are located under the floor of the mosque. This has been pointed out to me by B. O'Kane, whose D. thesis *Timurid Architecture in Khurasan*, Edinburgh 1982, includes the descriptions of both

buildings. — As for Tunisia, Prof. L. Golvin pointed out to me that the *zāwiya* of Sīdī Bakr Ḥasan at the cemetery of Djellāz near Tunis has an underground floor, the function of which he attributes to the *ḥalwa*.

(2) al-Zarakšī, Muḥammad ʿAbd Allāh. *Iʿlam al-Sāğid bi Aḥkām al-Masāğid*, Cairo 1964, p. 342.

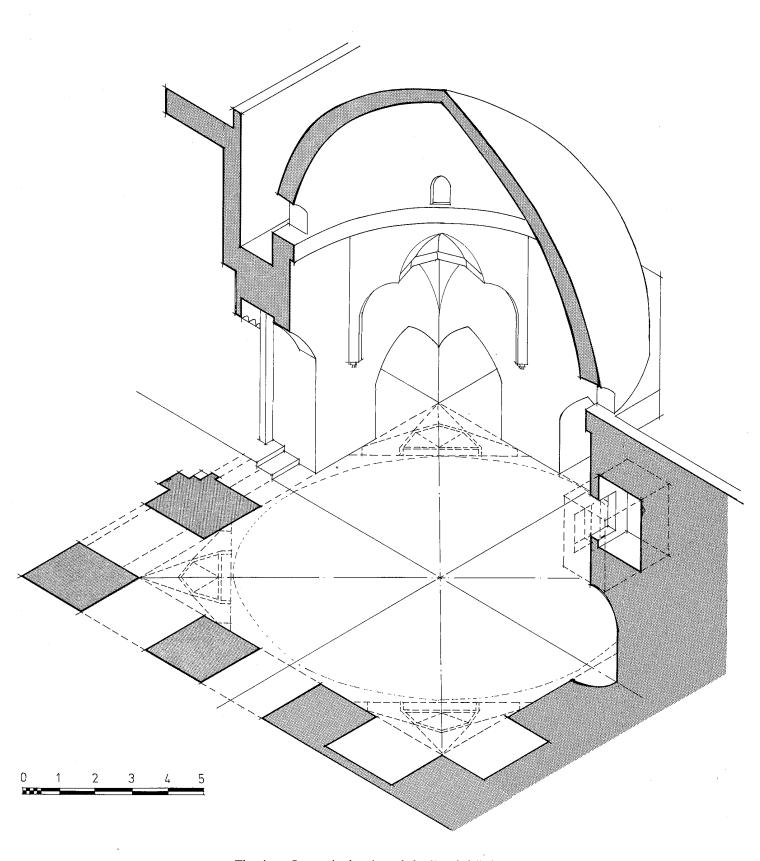

Fig. 4. — Isometric drawing of the Damirdāš dome.

Ibrāhīm al-Kulšānī — are connected with domes representing the usual funerary function: the cenotaph occupies the central part of the domed chamber, not much space is left that could be used as a congregational room, and their architectural features correspond with those of the usual contemporary funeral domes.

The dome pattern for a $z\bar{a}wiya$ does not appear for the first time in Cairo with the four above mentioned domes. There was already a tradition of building domed $z\bar{a}wiya(s)$. Maqrīzī mentions Qubbat al-Naṣr, a $z\bar{a}wiya$ built in the Fatimid period for the Sufis from Persia ⁽¹⁾. Ibn Baṭṭūṭa records that the Sufis in the $z\bar{a}wiya(s)$ of Cairo used to hold their meetings in domes ⁽²⁾: and Sultan Qāyṭbāy is reported to have built a $z\bar{a}wiya$ in a village in the Delta for a $\check{s}ai\rlap/p$, called Qubbat Muṣṭafā, i.e. it was built in the shape of a dome ⁽³⁾.

The question of why certain $z\bar{a}wiya(s)$ were built as domes and others not cannot be answered here, since the architecture of the $z\bar{a}wiya$ has not been documented yet. In the funeral complex of Sultan Barsbāy two $z\bar{a}wiya(s)$ are described in his waqf deed (4), one in the shape of a $q\bar{a}^ca$, and the other, Ma'bad al-Rifā'ī, in the shape of a dome.

It is possible that the dome, because it covers an independent square space, was more appropriate for certain sufi rituals than the $q\bar{a}^{c}a$ or the hypostyle room, the vaulted $iw\bar{a}n$ seems to have been abandoned in Cairo by the fifteenth century. The square and the spatial representation of the Sufi community play an important role in the ceremonies of many orders, and in the Damirdāšiyya as well (5).

THE ZAWIYA IN CAIRO

by Leonor Fernandes

The preceding section had dealt with a $z\bar{a}wiya$ foundation in the late fifteenth century. A $z\bar{a}wiya$ such as that example represents the final stage in the evolution of this Sufi foundation at the eve of the Ottoman conquest of Egypt.

By the end of the fifteenth century, foundations which served «popular Sufism», appealing to a broad strata of the population had already been fully integrated in the fabric of the society and were indeed to play an active role in the political and social scene (1).

The purpose of the following section is to try to define the type of Sufi foundation which is referred to as $\langle z\bar{a}wiya \rangle$ and to follow its evolution from a humble mosque or small construction rarely of architectural importance (2) to a fairly large structure with a plan dictated by the needs of the rituals of the order it serves — as in the case of Zāwiyat al-Damirdāš.

When did the term $z\bar{a}wiya$ first appear in Egypt? Ayyūbī sources do not bother to explain the origin of the term as they do with $hanq\bar{a}h$ and $rib\bar{a}t$ — a fact which indicates that the term was commonly used in Egypt at the time. However, it fails to indicate whether it was applied to parts of a construction or to a foundation, and old dictionaries must be consulted in an attempt to clarify the meaning of the term.

The word $z\bar{a}wiya$ as defined by Arabic dictionaries is a term of Arabic origin derived from $zaw\bar{a}$, which means « to bring together, gather, contract, conceal ». It also means « to withdraw into a corner, to go into seclusion ». When applied to a building, it refers to a corner $^{(3)}$.

An interesting attempt to explain the origin of the term zāwiya in connection with religious life is provided by 'Alī Mubārak who writes:

- «... and the village of al-Zāwiya is the old town known to the ancient people under the name of Aziyū or Azwā. Twenty Roman miles separated it from the city of Banī Suwayf and perhaps the distortion of its name in the Islamic period turned it into al-Zāwiya; and

possibly the name $z\bar{a}wiya$ which refers to a place intended for praying for Muslims was also derived from it because there were, in this town, many places by the name of Azyū dedicated to the cult of Osiris most of which had been transformed into $mas\check{g}id(s)$ for Muslims after the Arab conquest of Egypt. It is likely that the term $z\bar{a}wiya$ was taken from Azyū » ⁽¹⁾.

The preceding definitions do not indicate what the $z\bar{a}wiya$ looked like. Furthermore, the only surviving example of a building labelled $z\bar{a}wiya$ by its inscription, that of Zayn al-Dīn Yūsuf, is already late (2). Scattered information provided by the sources are therefore the only way to follow the evolution of the $z\bar{a}wiya$ as a foundation.

From the accounts of the chronicles, it can be surmised that for at least the two centuries following the Arab conquest of Egypt, the term $z\bar{a}wiya$ designated a part or a corner of a religious building rather than a separate structure. Both Maqrīzī and Ibn Duqmāq mention eight $z\bar{a}wiya$ (s) which formed an integral part of the Ğāmi al-Atīq, the first congregational mosque built by Amr Ibn al-Āṣ in Fusṭāṭ. Each of the $z\bar{a}wiya$ (s) was reserved for one šaiḥ and his students. There, the šaiḥ met daily with the students who gathered around him to listen to his teachings. The funds which provided for the upkeep of the $z\bar{a}wiya$ (s) came from waqf(s) endowed for each of them (3).

Even though such teaching- $z\bar{a}wiya$ (s) survived through the Mamluk period, there soon appeared another type of $z\bar{a}wiya$ directly connected with sufism, and thus conceived as an independent structure $^{(4)}$.

It is difficult to know from the scanty information provided by sources when such $z\bar{a}wiya(s)$ made their appearance. However, we do know that when $D\bar{u}$ 'l-N \bar{u} n al-Miṣrī, the founder of Egyptian Sufism, died in 245/859, he was buried in his $z\bar{a}wiya$. Later, the waqfiyya of Barsb \bar{a} y, which mentions restorations done by the Sultan at the $z\bar{a}wiya$ of $D\bar{u}$ 'l-N \bar{u} n, provides us with some information which allows us to assert that this $z\bar{a}wiya$ was conceived as an independent structure. Indeed the endowment deed allocates a monthly sum of 1,000 dirhams from the revenues of the waqf(s) to be used to restore the darih (tomb) and to buy water, mats, and lamps for his $z\bar{a}wiya$ (5).

We can assume that with the spread of Sufism the number of such $z\bar{a}wiya(s)$ used as a retreat by a saintly sain increased rapidly. However it seems that the foundations remained rather modest up to the Ayyūbī period, when the country was brought back to the main stream of Orthodox Islam after the fall of the Fatimid Caliphate. The return of Egypt to Sunnism exposed the country to new influences coming from other parts of the Muslim world. Among such influences are found those of the Sufi orders which made their appearance in Cairo and Alexandria as early as the thirteenth century (1). The appeal of the Sufi orders, each sponsored by one šaih, was not restricted to the masses of the population but attracted members of the ruling class as well. Sources mention frequent involvement of amirs or even sultans with one particular šaih whom they revered, and to whom they paid visits. The šaih(s) lived in zāwiya(s) often built for them by a rich amir or the sultan himself. Yet, at the request of some šaih(s) their zāwiya(s) did not have waqf(s) providing for their upkeep. Rather than accept waqf(s) for their zāwiya(s) the šaih(s) often chose to live on donations or sometimes sent their Sufis to beg from people. This refusal of the šaih(s) to accept endowments for their foundations perhaps indicates a desire to act in accordance with one of the principles of Sufism: faqr (poverty). However, another possible reason would be the conscious attempt of the Sufi šaih to remain independent from any political pressure which might eventually have been exerted on him, and remain closer to the masses. It is perhaps due to this lack of endowment that so few of the earlier zāwiya(s) have survived. Maqrīzī mentions 26 zāwiya(s) and Ibn Duqmāq 9, and as suggested by 'Alī Mubārak, that number increased rapidly during the Ottoman period (2).

At this point one should stop to examine what is meant by a $z\bar{a}wiya$ when referring to a Sufi foundation. It seems that from the thirteenth century and up to the mid-fifteenth century the term $z\bar{a}wiya$ should be construed as referring to an independent structure of small architectural importance. The structure, which could be a domed chamber, or a $q\bar{a}^{c}a$, with a $mihr\bar{a}b$, was always built for a particular šaih representing a tariqa (order). The tariqa (order). The tariqa (order) are a meeting place for the members of his order. The šaih met daily with his tariqa (followers) and tariqa (neophytes) who came to listen to the teaching of the order, meditate, pray and attend tariqa (Sufi ritual) (3). Such tariqa sessions, the core of the

Sufi ceremony and aimed at the catharsis of the spirits of the participants, varied from one order to the other.

At the dead of the šaih he was usually buried in his $z\bar{a}wiya$ which subsequently became a place of pilgrimage and acquired thereby some of the characteristics of a mašhad (shrine). Indeed the death of the šaih, who was already a saint during his lifetime, was commemorated every year by a mawlid (festival) which took place in his $z\bar{a}wiya$. The mawlid(s) attracted people from all parts of the country, who flocked to the šaihs' tomb to get his baraka (blessings). According to the sources most of the festivals were accompanied by reprehensible behaviour, bitterly criticized by the orthodox men of religion.

Since the foundation of a zāwiya aimed at the spreading of a tarīqa, the death of its šaiḥ was followed by the selection of a Sufi of the same order, often trained by the deceased, to replace him. Most of the time, the position of Šaiḥ al-Ṣūfiyya reverted to the son of the deceased whose close relationship with his father made him the most suitable of his followers. By the Ottoman period, the position of Šaiḥ al-Ṭarīqa had become hereditary as is the case with the Damirdāšiyya, the Bakriyya, the Suṭūḥiyya, to name but a few.

Up to the fifteenth century, it seems that the internal affairs of the $z\bar{a}wiya$ were left to the whim of its šaih. He was in charge of the spiritual life of his followers and was left to decide about the hours of meditation, recitation of the Coran, attendance of Sufi teachings and $hud\bar{u}r$ sessions. Since there were no rules imposed on the Sufis, except those set by the šaih, the unity of the group was preserved by the personal appeal of the šaih whose virtues and qualities called for respect and admiration from all members of his $tar\bar{\iota}qa$. Such loose ties based on spiritual attraction allowed an individual to join the $z\bar{\imath}awiya$ provided he showed the required disposition. Thus, if judged qualified by the šaih, he would be accepted as a $mur\bar{\iota}d$ (neophyte) and begin his initiation to Sufi teachings. After his initiation was completed, the neophyte was invested with the proper hirqa (robe) (1) during a ceremony in which all members of the $z\bar{\imath}awiya$ took part, and thus acquired the status of full Sufi i.e., he could consider himself as one of the $atb\bar{\imath}a$ (followers) of the šaih.

There is no reason to believe that any changes were introduced in the internal life of $z\bar{a}wiya(s)$ at least up to the fifteenth century, as mentioned earlier. Even then, the only major development which can be noted is that Circassian founders provided $z\bar{a}wiya(s)$

(1) For discussion of the various sufi birqa(s) cf. Trimingham, op. cit., 183, 306.

17

with considerable waqf(s) to maintain their upkeep. Moreover, the tendency was to build $z\bar{a}wiya(s)$ that were specifically founded for a particular order. Hence, we read in the waqfiyya of al-Ašraf Barsbāy that the sultan built a $z\bar{a}wiya$ which he founded especially for the tariqa Aḥmadiyya Rifā iyya (1). This new tendency to sponsor a particular tariqa led to the foundation of more than one $z\bar{a}wiya$ serving the same tariqa within the same city, as was the case with the Halwatiyya in Cairo.

The end of the Mamluk period saw the decline of institutionalized Sufism as embodied in the *hangāh* foundations. It also witnessed a rise in the importance of popular sufism and consequently of the foundation serving its diffusion: the zāwiya. Hence, the new foundations were gradually taking some of the functions of both ribāt(s) and hangāh(s) and were subject to major changes in their internal structures. As it appears from waqfiyya(s) of the early Ottoman period, life in the interior of the zāwiya was under the strict control of the founder who had to appoint the Sufis, limit their number, ask them to take up permanent residence in the foundation, and forbid them to work. In addition, Sufis were given a monthly salary fixed by the founder in the endowment deed. Some wāqif(s) imposed celibacy on all members of the zāwiya, while others chose to control their daily diet (2). The modifications of the life style of the Sufis within the foundation also entailed a change in their architecture. Hence, the small construction gradually turned into an important building. The zāwiya thus conceived, formed the core of a larger complex intended to meet the needs of the members of the tariqa. Such zāwiya complexes included a meeting place $(q\bar{a}^{\circ}a \text{ or } qubba)$, a large living unit for the šaih of the zāwiya, his family and his servants (riwāq), living units for the Sufis (hilwa or bayt), an ablution fountain (mida'a), a kind of bath (mustahamm), latrines (marāhīd), a well (bi'r) with a waterwheel (sāqiya), a cistern (ṣahrīğ) to store the drinking water distributed through the public fountain (sabīl), a grain-mill (tāhūn) and bakery (furn) for the preparation of bread. Some zāwiya(s) had also an oil-press (ma'sara) and perhaps a large garden where fruit trees or vegetables were grown. The tomb of the šaih was often

(1) The fact that Barsbāy states clearly that the zāwiya was founded for Rifā'iyya indicates his care to respect the legal requirements of the waqf (cf. al-Ḥaṣṣāf, Kitāb Aḥkām al-Awqāf (Cairo n.d.) and Ṭarābulsī, Mu'in al-Aḥkām (Cairo 1973) according to which a waqf is valid only if its object is not doomed to perish. We may thus assume that most of the zāwiya(s) said to have been built for one particular šaiḥ by an amīr or a sulţān

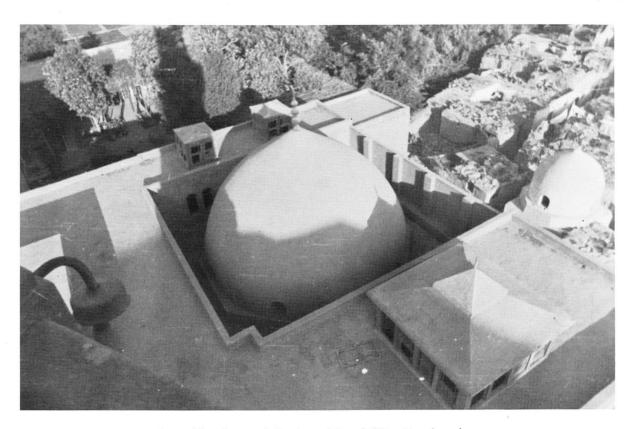

or a rich person, were founded for a particular tariqa which was meant to last.

(2) Ḥuǧǧat Waqfal-Šayḥ Ḥasan b. Iliyās. Wizārat al-Awqāf, Siǧill al-Daftarḥāna 1079, dated 941/1534; Ḥuǧǵat Waqf Sulaymān Bāšā. Siǧill al-Daftarḥāna 1074, dated 975/1567; Ḥuǧǵat Waqf Raḍwān Bey. Siǧill al-Daftarḥāna 994, dated 1038/1628.

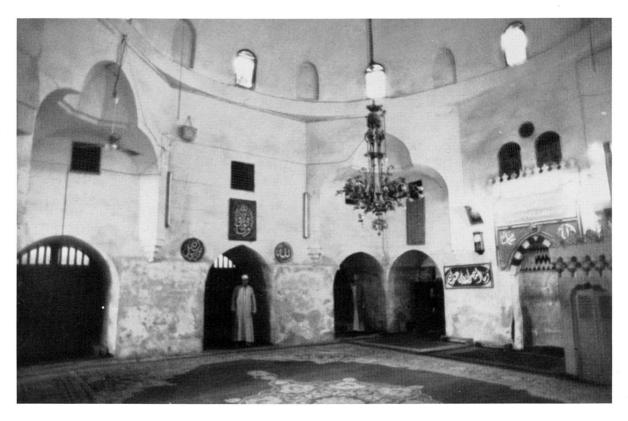

incorporated in the complex, however this was not necessarily the case since some šaih(s) chose to be buried in the cemetery.

It thus appears that since the Arab conquest of Egypt, and because of the evolution of Sufism during the following centuries, the $z\bar{a}wiya$ as an independent structure progresses from what was a simple retreat for a mystic to a large foundation serving a Sufi order, and developed an architecture proper to meet the needs of its members as well as the ritual of its $tar\bar{t}qa$.
