An Unpublished Granite Statue of *Diskophoros Ephébos* in Cairo

Sobhi Ashour

This article is dealing with an unpublished granite statue kept in the Cairo, Egyptian Museum J.E. 45055B, with unknown provenance. A label with a Basement Register Number reads N.723, is attached to the statue. The statue is missing the head and the largest portion of the neck which is broken diagonally. The legs beneath knees are broken away; maximum height reaches 30.5 cm.

The statue represents a boy dressed in *chlamys* carrying a round object on his back hanging in a sling. The body shows wide shoulders and tender lines indicate boyish appearance. The left arm is bent from elbow, enveloped inside the mantle and held tightly to the chest (fig. 1). The left hand is holding the two hanging robes of the round object on the back side (fig. 2). The right arm is extending beside the body, curves slightly to fix two folding edges of the mantle together on the thigh. The details of fingers beneath the heavy mantle are charmingly executed: four fingers appear on the left strap and the index rests on the right one (fig. 1). The details of the right hand are well treated, where the fingers are countable as well.

I would like to thank the anonymous referee of the Ifao who added very valuable remarks to this article.

Keith 1975, p. 138-139, no. 24, pl. 19, published a Hermacles from Tell Timai in Cairo Museum with the same Journal d’Entrée number 45055. The two entries are described “*statuette de Hermès drapé, tenant une massue. Tête et base manquen.*” The height of Keith’s herm is 22.2 cm and the material is white fine soft limestone, while the statue published here is carved in red granite and reaches 30.5 cm in height. The Timai herm is different from the statue; the mantle is grasped by right hand on the center of the chest not the left as in our statue. The left hand of the herm rests on the hip and carries a club, yet a broken Heraklian club is not traceable in the Cairo statue at all. Prof. Keith kindly sent me an image of her cat. 24 which confirms that there are two objects with the same register number. The authorities of Egyptian Museum in Cairo decided to keep the two pieces with the same number with adding a different labeling letters to distinguish them. The Basement Register N. 723, which was JE. 45055 is now JE. 45055 B. Previously the provenance of the two objects was confused and considered Thmuis, now it is clear that the statue in Cairo JE. 45055 B has no authenticated provenance.
The inner distance between legs indicates a marching posture, most likely the left leg was striding with a slight torsion outwards, while the right was fixed. The heavy *chlamys* is knee-length, or slightly longer, fastened on the right shoulder, with an elongated clasp appears beside the hanging robe. This clasp consists of two parts: a larger upper one, oval in shape, with round term, while the lower part is circular (fig. 3). The characteristic loose neck of the *chlamys* is elegantly carved on the left side, and the flaring textile has additional small fold. There is no indication of the chiton, since no hem of the neck or sleeves appear, and most likely this *chlamys* was worn on nude body.

The surface is well designed; the folds mostly follow diagonal lines, and reflect the marching and grasping action. Three folds appear on the right side of the chest, reflect the pose of the left hand. A triangular shaped group of folds appears beneath the left elbow on the belly. The right hand is grasping the mantle where its two edges are deeply folded between the legs (fig. 4). Circular folds appear on the right side, reflect the posture of fixed right leg and the grasped textile. The left side of the *chlamys* is worked into a group of vertical folds, almost flat in execution (fig. 5).

There is a circular object on the upper third of the back side, hanged by two thick robes, held in the left hand (fig. 6). The right side robe passes above the shoulder, while the left side one passes on the forearm, which indicates the heaviness of the slung object. On the front side, these two robes appear as a double robe with knots on equal distances, which don’t appear on the back side. These two straps get thinner gradually downwards and the difference in thickness is very apparent between its width on the backside and the belly. There are traceable spots of black paint all over the statue’s surface, which are most likely, remains of a painted surface rather than a fire in antiquity.

Subject

The ephebic *chlamys*,2 should gather the statue with two interesting sculptures: the much debated Traleis Boy,3 and another statue in the Roman National Museum.4 The first is believed to represent a boxer or pankratiast after his swollen ears (fig. 7),5 while the later is connected to the *Palaistra* and labelled *ephēbos* (fig. 8).6 The drapery of the *chlamys* on the three statues is similar to a specific draped type of torso herms,7 mostly represents Hermes, Herakles or

An Unpublished Granite Statue of *Diskophoros Ephébos* in Cairo.

According to Athenaeus 13.561d, Palaistra York, Private collection; Keith 1975, Egypt, and I have hinted the herms within athletic context from Egypt. Therefore the subject was the standard symbol of *Palaistra* and *Gymnasia,* and hence comes Cicero's label *ornamenta γυμνασιώδη.* The torso type of herms appears frequently in athletic context in the Hellenistic and imperial times, whether as Hermes, or Heracles. The pillar herm appears as well, on many Hellenistic and imperial funerary monuments, from ca. 300 BC, from Attica, Cyclades, Asia Minor, Delos, and Egypt.

Hermes and Herakles are attested as sponsor gods of *gymnasia* and *palaistra* in Graeco-Roman Egypt, and I have hinted the herms within athletic context from Egypt. Therefore the subject

---

8. Hermes was regarded as founder of *Palaistra,* and a draped herm of him could symbolize his pedagogic roll for ephebe, Pausanias 8.39.6 mentions a draped herm of Hermes in Phigalia *gymnasion.* Herakles was another sponsor god of *palaistra* and *gymnasion,* hence come the lion skinned-draped herm, which was common as well. Hermes was sponsor of spiritual side while Herakles was patron of physical side in the Greek ephebe education, therefore they are connected to athletic activity. Wrede 1986, p. 35. According to Athenaeus 13,56d, *apud* Scanlon 2002, p. 5, Hermes, Herakles and Eros "whose shrines were most frequently found in the ancient gymnasion by possessing that Hermes presided over eloquence *logos,* Herakles over strength *alé,* and Eros over friendship *philia*."

13. Von Steuben 1972, p. 139, taf. 37, 1-4; Huskinson 1975, no. 119, pl. 46.

14. Harrison 1968, p. 172, n. 105; the type is very common among terracotta representations, see Delorme 1960, p. 364.

17. A boxer statue from Sorrento, La Regina 2004, p. 284, no. 48, with other representations are listed.

18. A statue of athlete in Istanbul Archaeological Museum 180-192 AD, shows a Heraklean herm support, with the same conception but different drapery of the mantle, see Moreno 1995, p. 78, cat. 4.10.8.

21. Couilloud 1974a, no. 33, p. 439, fig. 36, no. 39, p. 444, fig. 42, no. 46, p. 448, fig. 46, from imperial date.

23. Couilloud 1974, no. 296-300, pl. 58; no. 473, pl. 83; Wrede 1986, p. 44f.

24. Herms are not found on tombstones from Ptolemaic and Roman Egypt, but uniquely a funerary limestone statue of man draped in mantle in Coan type, from Aithribis, stands beside a pillar herm, Kiss 1995, p. 44-51.

25. There are many dedications from Ptolemaic Egypt from ephebe to Hermes and Herakles for their patronage of ephebate and gymnasial activities. Fraser 1972, p. 86, 198, 208; Keith 1975, p. 46. Delorme 1960, p. 340, n. 7. While in Sebennytos the gymnasium was named Heraklion, Delorme 1960, p. 340, n. 8. In Thedalphia a *gymnasiarchos* dedicated a pylon to Hermes and Herakles, 150-149 BC. Delorme 1960, p. 340, n. 9. The much quoted *palaistra* scene on a terracotta lamp from Canopus, should not be missed here: where a young *ephobes* depicted with torch on the right and another punished *ephobes* on the left. An architectural facade appears in the background with a pillar herm between columns in addition to shields and perhaps *dishos* in sling. See Breccia 1930, p. 73, no. 469, tav. XII.3; Gloire d’Alexandrie, no. 72.

of the Cairo statue could be connected to *palaistra* and *gymnasion*, and it is identifiable as *ephébos* or athlete boy *paides* after his tender body and boyish appearance. Another point could support such identification is the traces of black paint on the statue. I do not believe that they are resulting after firing, but rather remaining from a painted surface, which was a common Greek and Egyptian practice. This black paint is very suggestive to recall the Athenian tradition of the ephebic black *chlamys*. That may confirm the proposed subject of the Cairo statue as *ephébos* and the round object on the backside may decide his athletic profession.

The round object with *chlamys* should recall a Macedonian head gears. Two types of head gears are candidate: the *Kausia* which never appeared with such hanging robes, while the *Petasos* has similar robes, but their shape is not gradually thinned. The *Petasos* sometimes is slung on the back but its shape is still indicating a head gear, and it is usually seen on the nape level, not down any more. The *Petasos* has a broad brim, shown circular or cut at angles, but its hallmark is the central knob. Both features are lacking on the Cairo statue’s round object. The statue is wearing the ephebic *chlamys* and the affinities with *gymnasia* world is already attested, therefore the round object perhaps, is best sought within Greek athletics equipments.

Among Greek athletic round equipments, shield should be excluded, after the size and shape of the object on the Cairo statue. This round object could be *diskos*, (fig. 6) which is the most famous round equipment in Greek athletics. The two ropes on the Cairo statue stand against this interpretation since the Greek *diskos* when appears in action does not have such robes. The Greek *diskos* when not in use was kept in a sort of sling, with its two ends tied in a knot, and this sling with the *diskos* inside is frequently represented hanging on the wall or carried in hands.

The athletic scenes on Greek vases show this sling or round bags, hanging on the wall, to keep *halteres* and *diskoi* (fig. 9). An important feature of this bag is the gradual thinness of its hanging straps. The thickness of the Cairo statue bag and the object inside favors a *diskos*.

---

27 At least since fourth century, see Vidal-Naquet 1986, p. 112, n. 31-32; Barringer 2001, p. 51f. This Black *chlamys* is believed to commemorate the death of Theseus’ father. It was changed by Herodes Atticus to white one on his father’s death, see Roussel 1941, p. 163ff; Tod 1931, p. 90; Vidal-Naquet 1986, p. 114; Maxwell-Stuart 1970, p. 113ff, is rejecting the ephebic black *chlamys*. 28 Girard *Ephebi*, p. 630, fig. 2680; Andronikos 1955, p. 87ff, fig. 1, 2; Saatsoglou-Paliadel 1993, p. 128, fig. 2, pl. 2.1. The Kalyx Krater in the British Museum depicts on side A, Aurora pursuing Kephalos, the latter wears *chlamys* and *petasos* slung behind the neck. Birch-Newton 1851, p. 314, no. 867, pl. CLIII. The polychromic pattern shows red straps on the chest, perhaps knotted below the neck but still different from the round shape and knotted ropes on the Cairo statue. The statue shares hunters’ iconography the *chlamys*, suspected head-gear and slung object on the back, but lacks any weapon or accompanying hunting dog or a prey. For representations of hunters, see Barringer 2001, p. 18, 53, 75, 80, 290, fig. 95, 96; Grossman 2001, no. 38. 29 See Paris, *Petasos*, p. 422, fig. 3610-561; Saatsoglou-Paliadel 1993, p. 122ff, esp. p. 129, fig. 1.2. The lion hunt mosaic from Macedonia shows a cut angels *petasos*, see Moreno 1995, p. 63, cat. 4.7.1. 30 Gardiner 1907, *passim*. The famous *diskoboloi* by Myron is the hallmark of the action, see La Regina 2004, no. 9 the Lancellotti copy. 31 Gardiner 1907, p. 8. 32 Saglio *Discus*. Comment on fig. 2466, p. 279; Caskey 1935, p. 129, 133, 134, fig. 1, 2; Gardiner 1930, p. 155, n. 3, fig. 114, 115, 118, 119, 129, 130; Reggiani- Ragni 2006, cat. 16; a Greek Red Figure vase in Hamburg depicts a scene from the *Gymnasion* showing the director prepares everything, among which is a *diskos* in its bag hanged on the wall. Douskou 1976, fig. 17, p. 49. A vase in Paris Petit Palais, shows another bag hanging on the wall. Douskou 1976, fig. 20.
more than halteres. Real diskoi, range mostly around 1 cm in thickness, and therefore, conforms to the volume of the object on the Cairo statue. Literary evidence attests the existence of such bags; sakkos and thulakos were used by the Greeks to keep their equipments while going to Gymnasia or baths. Pollux speaks about trochoi, halteres and diskoi, kept in these bags. Therefore it is very reasonable to identify the round object as sakkos with diskos inside. The statue therefore, represents ephébos or boy athlete in training on diskobolia. The diskos on the Cairo statue is decisive evidence that the two statues in Istanbul and Rome, belong to the world of Gymnasia and Palaistrai, and support their identification as athletes.

The Cairo diskophoros is of particular importance, first of all because of the paucity of athletic representations from Graeco-Roman Egypt. The statue subject is unique and does not find parallel anywhere, it presents for the first time a glimpse of the ephabetic daily life, up to now never been caught in classical art. A draped boy carrying diskos on his way to gymasion, is completely different from the before action, nude Antretender diskobolos, and not to mention the Myron famous statue. The diskobolia was one of the Greek pentathlon’s five contests, and this category of athletes was regarded as the superior in ability and power, and winning a pentathlete contest required different skills and qualifications. The Greek pentathletes represented the Kalokagathia which means the physical and moral beauty and harmony. The sophisticated composing and elaborated style of the Cairo diskophoros correspond to these highly estimated athletic Greek conceptions.

The Greek pentathlon appears in few papyri but without a single Olympian victor from Egypt, while within other Pan-Hellenic games, however one victor is recorded. Nikostratos son of Nikostratos from Alexandria won the boys Pentathlete at the Asklepieia of Kos in the second half of the third century BC. Few figurative references to diskobolia are known from Egypt among which is a small bronze statue in Basel. In addition to an inscribed diskos, found in Kom Ishgou Aphroditopolis, was dedicated to Apollo by Apollodoros, dated to late fourth century BC.

The Cairo diskophoros perhaps is the first assured athletic sculpture in the round from Ptolemaic and Roman Egypt. The archaeological material is scanty and lacking decisive attributes: a statue of a boy athlete in the Louvre, may represent a god as well. Another

---

33 La Regina 2004, p. 190, no. 28, 1 cm in thickness, from Tarentum. Another diskos from la tomba del guerriero di Lanuvio, in Roman National Museum, varies between 0.65-0.7 cm. La Regina 2004, p. 272, no. 47. Fifteen real discs tabled by Gardiner 1907, p. 6, vary between 5-13 mm in thickness. A marble diskos, dates to the second half of the sixth century BC, reached 5 cm in thickness, see Bothmer 1986, p. 6; on diskoi, see Miller 2004, p. 60f, fig. 105-107.
34 Pollux, Onomasticon III.155, X. 64; Lafaye Saccu.
35 I am very grateful to the anonymous referee, for stressing this note in his report.
36 La Regina 2004, p. 146, no. 11.
38 Decker 1991, p. 96; among 163 victor athletes known from literary material from Egypt, there is no single example of diskoboloi or pentathlete, see Perpillou-Thomas 1995, p. 24ff. The Penathlon appears POxy.II. 222, POxy.XXIII. 2381, both contain lists from 480-452 and 396 BC. The inscription of the 267 basileia doesn’t mention pentathlon or diskobolia among agonistic contests held there. Koenen 1977, p. 4-5, 9.
39 Klee 1918, p. 6, lines. 13-14; Peremans-Van’t Dack 1968, no. 172232; Remijsen 2009, p. 256, n. 44.
40 Rolley 1983, no. 177. A statue depicts Hermes, formerly in von Sieglin Collection, from Alexandria, showing the god carrying a diskos, in his right hand, which is an interesting indication of Hermes’ patronage of athletics. A similar figure on plaster cast, formerly in von Bissing Collection shows Hermes carrying diskos in his right hand as well. See Pagenstecher 1923, p. 51f, taf. 32, abb. 35-37.
41 Michaïlidès 1949, p. 100, pl. III, 2; Peremans-Van’t Dack 1968, no. 17193; Remijsen 2009, p. 256 n. 44.
42 Charbonneaux 1963, p. 76.
wreathed head of Isthmian victor, perhaps represents a boxer from imperial times. Few terracotta and bronzes are known as well: among which is the bronze diskobolos in Basel, and another bronze boxer in Cleveland. An upper bust of boxer in terracotta, from Canopus in Alexandria, is very remarkable with its high boxing gloves. Many groups of wrestlers or pankratiasts in bronze and terracotta could be listed: in London, Baltimore, St Petersburg, Munich, Tanta, Marymount, Athens, Istanbul, and Cairo. Some examples perhaps have an allegoric meaning, and Ptolemaic royal identity has been already proposed.

This paucity of archaeological material is contrasted to the plenty of literary material, which reflects noticeable athletic activities. The Alexander’s theatrical and athletic games Basileia at Memphis in 332–331 BC, perhaps did not lack the political purposes, but it was connected with the king birthday since Philadelphus’ reign. Philadelphus founded many agones; the iso-Olympic Ptolemaieia, the Pentaeteris and Theadelphia were remarkable theatrical and athletic events, while the Arsinoeia was annual festival for the deified queen Arsinoe II. Ptolemaic kings were active sponsors of athletes and athletics since the Soter’s reign, especially the equestrian contests. The Zenon archive shows a professional training of boy athletes,

59. The Istanbul group is suggested to represent Ptolemy III after the childish hair lock, Kyrieleis 1975, tav. 19, 34; Moreno 1994, p. 331, fig. 419; The Baltimore group is suggested to represent Ptolemy Epiphanes after the childish hair lock, Kyrieleis 1975, tav. 43.5-6; Reeder 1988, p. 151 ff.
61. Inscriptional data show that it contained agonistic contests and was celebrated in the chora as well, or within special circumstances. Fraser 1972, I, p. 232-II, p. 382, no. 341; Koenen 1977, p. 4ff; Criscuolo 1995, p. 44, n. 5; McKechnie-Guillaume 2008, p. 30; Remijsen 2009, p. 259.
64. Ptoleomy Soter sponsored victor chariotiers in main PanHellenic games, a tradition followed by Ptolemites till Philometor’s reign. See Decker 1991, p. 96ff; Bremen 2007, p. 362-363, but an Egyptian winner in equestrian Olympyan contests, however is recorded in 72 BC, see Scanlon 2002, p. 43. For Ptolemaic achievements in equestrian contests, see Remijsen 2009, p. 249ff; on Royal participation in Pan-Hellenic games and particularly equestrian contests, see Criscuolo 2003, p. 31ff; Bennett 2005, p. 9ff.
within state patronage to achieve Olympic victories.65 The lists of Olympiad victors did not lack Alexandrian or Egyptian athletes,66 in addition to other victors in Pan-Hellenic games.67

During Roman times, imperial sponsorship of athletics most likely extended to Egypt, and at least athletic festivals and games began by the Aktia in Nicopolis by 30 BC,68 and other festivals are recorded within second century as well.69 Athletes in Roman Egypt enjoyed many privileges and benefits in their cities up to public offices, pension and exemption of public liturgies.70 These athletic activities perhaps are owing to the flourishing of metropoleis life, where the Hellenic elite recalled traditional Greek conceptions of polis culture, especially after the Severus and Caracalla reforms.71 Alexandrian athletes of Roman era were professionals in heavy contests like boxing, pankration and wrestling in addition to stadion.72 Many remarkable heavy athletes with outstanding careers are known and well documented.73 The Olympic

65 Pyrrhus, who was sent to the Hieroclé's Palaistra in Alexandria for better training and Zenon asked about possible victories, Gardiner 1930, p. 116; Gardiner 1930a, p. 211-213, n. 56; Paplas 1991, p. 179, n. 56; Legras 1999, p. 25f. From the same archive appears another boy athlete named Dionysos, winner in Prolæmata of Hiera Nesos in 259 BC, under protection and training, Legras 1999, p. 27; Cribiore 2001, p. 52f; Remijisen 2009, p. 258. Ptolemy IV or perhaps Epiphanes, trained the pupil of Aristonikos who nearly defeated the great Kleitomachos in the 141st Olympiad 216 BC, see Fontenrose 1968, p. 97; Paplas 1991, p. 192, n. 56; Bremen 2007, p. 374; Fraser 1981; Hölbl 2001, p. 142.
66 Gardiner 1907, p. 4-5, n. 19; Decker 1991, p. 94, among 48 victories by 40 Egyptian victors 34 are from Alexandria; Perpillou-Thomas 1995, passim; Christesen 2007, p. 32, 329ff. P.Oxy.II. 222 which contains a list of Olympic victors between 480-452, most likely is remaining of a complete list, but however reflects such interest in athletics even in the second century Oxyrhynchus. The importance of Olympiad victories in Alexandria is apparent from the Eratosthenes lists of Olympic victors, Decker 1991, p. 102; Christesen 2007, p. 163,174.
67 Remijisen 2009, p. 256. Even in the latest period of Prolæmaic kingdoms, Egyptian athletes were able to record six Olympiad victories by three victors between 144-40 BC, Scanlon 2002, p. 45; tab. 2.1.
68 Remijisen 2009, p. 259.
69 Adrianeios Kai Philadelphios, the Seleukids and iso-Olympic games by Marcus Aurelius are recorded, see Decker 1991, p. 100, n. 33; Criscuolo 1995, p. 44, n. 31, 30, 35.
70 About pension of athlete from Hermopolis, see Gardiner 1930, p. 113. About an exemption of a victor in the games from liturgy, see P.Oxy.I. no. 59. On public display by the ephebe in the city of Oxyrhynchus, P.Oxy.I. 42, see Bagnall 1993, p. 101, n. 368-370; for more details and account of papyri, see Bagnall 1988, p. 42, 44.
71 The relatively freer economics of the Roman times, encouraged more effective local elite in the metropoleis. This class is responsible for the gradual spread and dominance of Hellenic culture in Roman Egypt. The Hellenism as well, was widely stressed in the Greek east under Roman Empire, Smith 1998. That may stand against Scanlon 2002, p. 52 explaining the rarity of Olympic victors from early Roman period in Egypt that ‘‘ethnic unrest between Greeks and Jews in the early Empire required stricter regulation of gymnasion enrollments, since Roman administrators might have discouraged youth organizations of Greeks who might band together for political reasons against Jews or even Romans’’. Bagnall 1988, p. 44 rejects Frisch’s argument that athletics and agonistic activities flourished in Egypt only by late empire, and was not known out of the Greek poleis. Bagnall on the contrary counts examples from papyri for citizens from Hermopolis Magna from second century. It is reasonable to compare the athletic activities based on ephebeia and gymnasion as attestation of Hellenism to another important manifestation of Hellenism which is the palaestrae statuary type. The type symbolizes pure Hellenic conception of the educated and intellectual citizen of the polis, Smith 1998, p. 67, which practically based on ephebeia and gymnasion education in adolescence. This type is very rare from Egypt in the first century AD, but dramatically increased in second century while the bulk of material comes from third and fourth centuries AD. Ashour 2007, p. 604-621, cat. 262-279.
73 Flavius Archibius, incomparable victor in the 220th and 221st Olympiads, winner of Pankration in the Caphalina AD94 and other games, with forty six victories listed. Miller 1991, p. 168; Criscuolo 1995, p. 44. Marcus Aurelius Asklepiades the Periodonikes, victor in the main Pan-Hellenic games, and holder of many civilian and religious offices in Alexandria and other cities 255-250 AD. Many statues were dedicated in his honor in prominent places in Rome, see Miller 1991, p. 171; Decker 1991, p. 100; Drew-Bear 1991, p. 211, n. 20; Goette 1992, p. 178. For other remarkable athletes, see Drew-Bear 1988, Decker 1991, p. 95, 100f.
lists of Egyptian victors in Roman times show dramatic increase from Julio-Claudian to late imperial times.\footnote{One victor only is recorded in the Julio-Claudian period, see Scanlon 2002, p. 51f, n. 11.}

The Athletic building like Gymnasia\footnote{Marrou 1982, p. 104; Scanlon 2002, p. 52; Remijksen 2009, p. 217. Alexander’s gymnasium is well documented within central events in the history of the city, in addition to other gymnasias as well, Delorme 1960, p. 137-140; Fraser 1961, p. 145; Burkhelter 1992, p. 145 ff.} are known in Ptolemaic Egypt since third century BC.\footnote{Cribiore 2001, p. 35. Two inscriptions on two statue bases from Thmuis in the Nile delta attest two gymnasiarchoi, see Breccia 1932, p. 68; Fraser 1972, II, p. 115, n. 23; Delorme 1960, p. 201; Meulenaere-Mackay 1976, no. 237; Breccia 1923, p. 123-124; Fraser 1972, II, p. 116, n. 23; Meulenaere-Mackay 1976, no. 235, dated to 150 BC, see Fraser 1972, II, p. 185, n. 66.} The Metropoleis and villages had their gymnasia in the Ptolemaic period,\footnote{The third and fourth century shows 17 victories within Flavian to Antonine period, see Scanlon 2002, p. 51f, n. 31 table 2.2 while 15 victories within Flavian to Antonine period, see Delorme 1960, p. 139-40. Known as well in Ombos, Pharbaithos, Psenamosis, Ptolemais, Theadelphia and Thmuis, in the second century, Delorme 1960, p. 199-200. A gymnasium and ephebeum is recorded from Aphroditopolis in first century BC. Delorme 1960, p. 220. A dedicational inscription from the Pelusium gymnasium was recently uncovered, see Carrez-Maratray 2006, p. 384ff, fig. 1.} but those of village were closed in Roman time when gymnasium was considered a symbol of the proper polis.\footnote{Scanlon 2002, p. 60, tab. 2.4.} The Palaistrai are known in Ptolemaic and Roman Egypt as well.\footnote{See n. 25.} Alexandria had more than one of such buildings,\footnote{Marrou 1982, p. 104; Scanlon 2002, p. 52; Remijksen 2009, p. 217; Alexander’s gymnasium is well documented within central events in the history of the city, in addition to other gymnasias as well, Delorme 1960, p. 137-140; Fraser 1961, p. 145; Burkhelter 1992, p. 145 ff.} and even a town like Philadelphia had small palaistra which denotes the existence of another.\footnote{Burkhalter 1992, p. 185, n. 66.} Other athletic buildings like stadia are documented, the Lageon was the chief stadion in Alexandria and remains of another at least, were documented in Antinopolis.\footnote{McKenzie 2007, p. 203, fig. 355. For the Antinopolis stadium, see McKenzie 2007, p. 154ff.}

The ephebic institutions are well attested from inscriptions since second century BC,\footnote{The first age class is the prepehebe mellakes, but their age is not definite yet. The next age class is the ephebeusin. The ancient ephebeus in ephebeus most likely was timed for one year, and began by age of fourteen. The ephebic institutions continued in Roman times and each metropolis had an elite male group defined by membership of the gymnasium which was obtained via admission to the ephebate. The Alexandrian citizenship was constructed on this gymnasia pattern and ephebic training and privileged to the sons of citizens only.} which show different stages of ephebeia.\footnote{Whitehorne 1982, p. 173-174, it disappeared from Egyptian documents after 323 AD, see Bagnall 1993, p. 60, n. 96.} The ephebic training most likely was timed for one year, and began by age of fourteen.\footnote{The last attestation of a village gymnasium comes from Herakleopolitan nome AD 2, Bowman-Rathbone 1992, p. 121, n. 74. From third century gymnasium are recorded in Luxor, Philadelphia, and Samarea in Fayyum, see Delorme 1960, p. 139-40. Known as well in Ombos, Pharbaithos, Psenamosis, Ptolemais, Theadelphia and Thmuis, in the second century, Delorme 1960, p. 199-200. A gymnasium and ephebeum is recorded from Aphroditopolis in first century BC. Delorme 1960, p. 220. A dedicational inscription from the Pelusium gymnasium was recently uncovered, see Carrez-Maratray 2006, p. 384ff, fig. 1.} The ephebic institutions continued in Roman times and each metropolis had an elite male group defined by membership of the gymnasium which was obtained via admission to the ephebate. The Alexandrian citizenship was constructed on this gymnasia pattern and ephebic training and privileged to the sons of citizens only.\footnote{The paucity of traces of Palaistra education is well documented within central events in the history of the city, in addition to other gymnasias as well, Delorme 1960, p. 137-140; Fraser 1961, p. 145; Burkhelter 1992, p. 145 ff.}
ephebes were required to show gymnasial ancestry on both sides, and later under Domitian a permanent rolling system of epikrisis examination was introduced. Therefore it was socio-political elite and an aristocratic institution that may explain the storming political events within Ptolemy Physecon’s reign. Ephebic games as well, are known since Ptolemaic period, but were very common in Roman times.

The statue represents ephébos, therefore a member of a class which belongs to the Hellenic elite in Ptolemaic and Roman Egypt. Unfortunately the head is missing, that it could reveal many artistic and cultural aspects relating to this remarkable sculpture and its identity. The boy athletes paides and ptolemaikoi are very well known from Egypt, their appearance in the chief royal athletic celebrations is documented. The above mentioned Pyrrhus, is described as paidiarion, little boy. Three groups of young athletes appear in an agnostic inscription relating to the Basileia celebrated in Herakleopolitan nome in 267 BC. Paides are less than 14 years, Ptolemaikoi between 14-17, and ageiexoi, “beardless” range between 17-20 years. Therefore the Cairo statue most likely represents paides or Ptolemaikos after the tender body and boyish appearance.

Typology

The statue already has been gathered with the Tralleis Boy and the ephébos in Rome, all have specific hallmarks: the left hand is held tightly to the chest and a short mantle is fastened on the right shoulder. These two sculptures are connected to Daochos I statue in

claims his son has become an ephèbos. Bowman-Rathbone 1992, p. 115, n. 42. A gymnasion membership was the basic qualification to hold office in Roman times and supposedly in Ptolemaic period. Bowman-Rathbone 1992, p. 122; Scanlon 2002, p. 43, n. 31.

89 He exiled the ephèbe among all remarkable persons of mind and skill after conflict with his brother, see Legras 1999, p. 141, that may explain why sometimes there is a chapel of royal cult inside gymasia in Egypt, some times thrones are recorded like the Pharbaithos gymnasion during second century BC. Delorme 1960, p. 199-200, 241, 340. For a Ptolemaic thrones from Rhodes, see Fraser 1961, p. 148.

90 In Hermonthis, Legras 1999, p. 204ff.

91 In Antinopolis since 130, and in Hermopolis Magna. In Oxyrhynchus Isto-Antonina was established since 199-200, and then was changed to sacred games, see Rigsby 1977, 147ff; Legras 1999, p. 242ff. The Capitoline in Oxyrhynchus see Παγών, no. 8, dated to 273 AD, and another Capitoline, in Antinopolis see Παγών, nos. 9-10 dated to 272 and 275-276 respectively. Leontopolis in the Delta had its ephic games as well, Tod 1951, passim; Whitehorne 1982, p. 179, while Panopolis dedicated her games to Perseus Ouranos, Bagnall 1993, p. 101, n. 367. Alexandria is most expected to have such games, Crisculo 1995, p. 44.

92 Koenen 1977, p. 4-5, pp. 15-17; Legras 1999, p. 231 f.

93 Gardiner 1930a, p. 211-213, n. 56; Paplas 1991, p. 179, n. 56; Legras 1999, p. 25f. Another anonymous paidion appears in the Zenon archive, where he frequently to a small palaisa “palaisitridion” in Philadelphia where the director asks Zenon to supply his allocations about dressing and food. Legras 1999, p. 28.

96 Mendel 1914, no. 142; Lawrence 1927, p. 44-45, pl. 74-75; Bieber 1955, p. 164, fig. 698-699; von Steuben 1972; Pollitt 1986, p. 261, fig. 286; Smith 1991, p. 54, fig. 51; Andreae 2001, p. 60, taf. 3-4; Ridgway 2002, p. 171.

97 von Steuben 1972, taf. 36; De Lachenal 1979, p. 148, no. 103; Andreae 2001, p. 61, abb. 15.
Delphi,\textsuperscript{98} (fig. 10) and considered reproductions of the type. The Cairo statue depends on this type for the body and dress, with some additions. The three statues supposed to copy the Daochos statue show some typological differences. The Tralleis boy is, uniquely, standing against a pillar (fig. 7), while the Rome (fig. 8), and Cairo statues (fig. 1), are standing freely, since no attaching points are traceable (fig. 2, 4, 5).

The Daochos I statue, like the rest of the Thessalian dedication depended on struts,\textsuperscript{99} clearly differs from the Tralleis Boy pillar. The absence of the pillar in addition to the full frontal posture in the Cairo statue should indicate that the Tralleis Boy and Cairo statue are two different variations depended on the same prototype. The Tralleis Boy with its leaning body and crossed legs seems very developed after the Daochos statue, and the type perhaps was created in the late fourth or early third century BC\textsuperscript{100} (fig. 7). The posture of leaning figure against a pillar, with crossed legs is hinted on fourth century vases.\textsuperscript{101} A Hellenistic terracotta statuette from Egypt, depicts a leaning \textit{kausiaaphoros} against a pillar with crossed legs, would challenge the Roman date of the Tralleis Boy type.\textsuperscript{102} The Cairo \textit{diskophoros} most likely depended on the body type of Daochos I with modified drapery lines.

The head perhaps was turning right in the entire group, as seen on Tralleis statue (fig. 7), the breakage on the Rome (fig. 8), and the Cairo statues (fig. 1), indicates the same posture and the same slightly looking down head. The Daochos statue is missing the head, neck and largest portion of right shoulder; therefore it is difficult to judge its original head’s pose (fig. 10). The accordance of the three statues, in Istanbul (fig. 7), Rome (fig. 8) and Cairo (fig. 1) perhaps suggest the original pose of the same prototype; Daochos I statue (fig. 10).

Another interesting typological difference is the crossed legs, since it appears in the Tralleis Boy, (fig. 7) but it is neither attested in the statues at Rome and Cairo nor the Daochos I. The marching pose in Cairo statue is closer to the Daochos statue, where the left foot is firming while the right leg is drawn backwards to make the next step, the missing right foot perhaps, was touching the ground by toes only (fig. 10). This posture is executed in mirror figure with
fixed right foot, while the striding left leg, shows a slight torsion outwards. Therefore it seems reasonable that the Cairo statue is not replica from Daochos statue or the Tlaileis Boy type, but rather an eclectic Alexandrian variation depended on the two statues. The absence of replicas out of Egypt should support this hypothesized Alexandrian creation of the type.

The sculptor of this Alexandrian eclectic type added interesting innovations which are the pose of right arm and the slung disks. The last feature, it is apparent, depends on the tightly held left arm to the chest beneath the chlamys which is already found in the entire group. The hanging ropes of the disks on the back side, is clearly an Alexandrian innovation. The pose is natural and perhaps the sculptor was inspired by the gymnasium world at the poleis, where an athlete is expected to be seen in such posture with such bag. The composing should have depended on Greek models, but typical parallel is not detected yet.

Greek vases present very close conceptions and forerunners of the gesture. An Apulian amphora in the Hermitage depicts a priestess of Hera, carrying a clef on her left shoulder, where the bent left arm is very comparable\textsuperscript{103} (fig. 11). The komos scenes on Greek vases sometimes show comasts with hanging baskets or boxes on the backside.\textsuperscript{104} The motive should have depended on wide range of genre figures; farmers, shepherds and hunters, sometimes are depicted carrying their loads in comparable gestures. An Alexandrian statue of farmer is a good confront; the man is marching, carrying a basket on his back and the straps are passing on forearms across the chest.\textsuperscript{105} Many other examples of this category of art works show occasionally straps, but ever in different way.\textsuperscript{106} Another Alexandrian statue presents close typological confront to this

\textsuperscript{103} Löwy 1893, p. 270f, fig. 1; Toutain Saccades, p. 939-40, fig. 5990.
\textsuperscript{104} Beazley 1922, p. 44, no. 4, pl. 43: Thompson 1947, p. 123ff, p. 124; Moore 1997, no. 633, pl. 68. Moore speaks about straps, and the whole appearance is similar to an Egyptian bronze statuette in Copenhagen. Bayer 1983, abb. 21-22, p. 123ff, p. 268. Himmlmann 1983, taf. 43 b. Many examples of the theme show baskets hanging on walls, see Moore 1997, nos. 19, 173, 629, 890, 1416, 1421, 1607, 1625. The subject of running boy with wineskin slung on the back presents very close conception and could be forerunner of the complicated pose on the Cairo statue. See, Hayes 1981, p. 32, pl. 37:8; a cup in Royal Ontario Museum. See as well, Simon 1997, p. 113, fig. 20b, old Selinos with wineskin on shoulder, 350-325 BC. This posture appears in two figures of Papposelinus from Delos, marching with tambourine in right hand and wineskin on the back shoulder, second century BC. The left arm is bent and holding the rim of the wineskin, and the whole appearance is conceptually very close to the Cairo Statue. Marçané 1969, p. 102, n. 2, 113, 137, 200ff, 288, 450, pl. XXIII; Smith 1991, p. 242, fig. 313. Similar wineskin carried in similar way by a satyr accompanying Dionysos on the Poet visit relief, Pollitt 1986, p. 197, fig. 211; Moreno 1994, p. 726f, fig. 899. An interesting comast figure in Mississippi shows a lyre hanging on the left shoulder, and bent left arm to the chest with clinched fist. The relation between the hand and lyre is not clear, but shows very close conception to the Cairo statue. Robinson 1956, p. 19ff. pl. 15-16, fig. 68. A Chous in Berlin shows a laden young man, but the way in which the object is carried is different. Smith 2007, p. 159, fig. 8.5.

\textsuperscript{105} Bonacasa 1960, p. 170ff, tav. L-LIV; Laurscher 1982, cat. 23a, tav. 17:1.
\textsuperscript{106} A funerary stele of hunter carrying a load on his back, in Paul Getty Museum, dated around 325 BC, presents different details but similar conception, Grossman 2001, p. 104-106, no. 38. A terracotta type from Myrina, known in many copies: a boy with left hand is held to the chest, carrying a quiver on his back, Winter 1993, II, taf. 239 no. 10, with list of replicas; Higgins 1967, p. 116-117, pl. 56 E; Kassab Tegzgor 1988, nos. 80-86, 183. The motive is close but the way which in the quiver is hanging still unclear. Artemis carries sometimes a quiver on backside, mostly without indication of suspension way, but sometimes hanging strap is used, Walters 1893. B.245, B.260, B.316, LIMC II, sv. Artemis, nos. 113, 155, 162-168, 171, 174, 242, 268, 317a, 560, 1140, 1171a, 1283. From Alexandria, some genre figures present a closer conception to this part. A bronze statuette in Copenhagen represents fisherman carrying a basket or box on his back. The load is slung; straps are seen on the shoulder passing beneath the armpit, Bayer 1983, abb. 21-22, p. 123ff, 268; Himmlmann 1983, taf. 43b. Very close as well, is a terracotta figurine from Hadra Necropolis, that represents a harp player. The harp is
motive: the terracotta satiric donkey-headed statuette of a teacher, dated to second century BC. The left arm is bent inside the mantle and holding presumed diptychon.

Among athletic figures, an Alexandrian terracotta statuette is very worthy mentioning: the boy is enveloped in elegant himation, carrying a crown inside Lemniscus on the right shoulder in mirror figure of our statue (fig. 12). Another statue of boy athlete in the Cleveland Museum, known in many replicas, presents good conceptual confront to the Cairo diskophoros. The boy is nude, marching; his face is turning right and looking down. The right arm pose is a mirror figure as well, held tightly to the chest. The right hand is holding a robe, on each end hangs a jumping weight. The conception of carrying a load on the back side with robe passes on the shoulder is comparable to the same motive on the Cairo statue (fig. 13). These two statues belong to the world of gymnasia, both present a feature should be labeled rare.

The other interesting addition to the Daochos type is the pose of the right hand, which fixes the two edges of the chlamys. The Daochos statue shows the right arm hanging freely beside the body (fig. 10). The right arms in Tralleis boy and the Rome statue are enveloped inside the mantles, and the folds are flaring on that side (fig. 7, 8). The gesture of the right hand in the Cairo statue shows the mantle’s rear edge held by hand, overlapping the front edge, but in diagonal pattern and severe linear execution, with no typical parallel up to my knowledge (fig. 1, 2). The motive of holding a dress’ edge with the hand enveloped inside the same mantle began with the muses figures on the Mantinea base, and the statue of Aeschines from ca. 320 BC. The motive appears as well on the famous Herculaneum women, male and female sculptures, funerary stelai (fig. 16), Tanagra figurines, and a common Hellenistic type of kausiaphoros boys.
The common terracotta type is showing a standing boy with ankle length Chlamys, Kryptides and Kausia on his head,\textsuperscript{118} and therefore its Macedonian affinities are unsuspected.\textsuperscript{119} The type is attested in Attica from third century BC,\textsuperscript{120} from Demetrias, Thessalia, Troy, Sicily, Asia Minor, Syria and Cyrenaica.\textsuperscript{121} Alexandria earliest examples come from Chatby,\textsuperscript{122} Ibrahimia\textsuperscript{123} and Hadra cemeteries and date to the third century BC.\textsuperscript{124} The posture is similar to Cairo statue and the conception of folding edges of the mantle held by the hand is very common. The beautiful boy from Attica in the British Museum presents close conception, but the whole appearance is still different.\textsuperscript{125} More closely is a terracotta statuette of kausiaphoros boy, from Hadra Necropolis, dates to third century BC\textsuperscript{126} (fig. 14).

The Cairo statue shows many typological differences from this terracotta type, but its dependence on the same conceptions is apparent. The body of the Cairo statue is still loyal to the Daochos I statue, in the marching pose which is different from the twisted body and contrapposto posture of the Alexandrian kausiaphoroi. Despite the missing head, one can guess a different hair style; since no traces of hair locks are seen on the shoulders. The terracotta type, it is noticed, usually has a shoulder length hair style\textsuperscript{127} (fig. 14). More interestingly is that

\begin{itemize}
  \item Winter 1903, II, taf. 237ff; Thompson 1963, p. 54ff; Higgins 1967, p. 100; Schneider-Hermann 1984, p. 303f.
  \item Saatsoglou-Paliadel 1993, passim; Fischer 2003, p. 375ff. The chlamys was the dress of Macedonian courtiers, Thompson 1963, p. 54, no. 144 suggested that Theocritus XV, 6, is talking about soldiers in uniform in the Alexandrian Adonisica. The garment in Ptolemaic Egypt should have indicated high rank, since it was Macedonian dress and Theocritus talks about men Andrēs, Gow 1938, p. 190. Ptolemy the younger son of Cleopatra and Antony was dressed in Kausia, Chlamys and Kryptides, during the Alexandria donation of 34 BC. Thompson 1963, p. 53, n. 136; Gow 1938, p. 190. Therefore the chlamys should be regarded as Macedonian symbol in Egypt as well. The prototype of this Alexandrian terracotta type, should not be royal, since these kausiaphoroi boys have their head gear painted in blue or blue green not purple which was the insignia of royal Macedonian kings and notaries. Saatsoglou-Paliadel 1993, p. 126, 134; Fischer 2003, p. 370-377, n. 25, 35. From Egypt, few known examples of royal Ptolemaic funerary stelai representing soldiers should not be missed here, see Brown 1957; Rouveret 2001. An interesting papyrus 199-200 AD, shows that a charníaphoros enjoyed some civil privileges, granted by the senate of Karanis. Another papyrus from Oxyrhinchus third-fourth century AD, appoints out that the chlamys was the proper garment for a meeting of notaries, Pehl 1940, p. 384f, 388f. One may guess that the chlamys here is an insignia of ephebic education? A late third century funerary stele, Coptic Museum 8029, attests the last phase of chlamys draping in Graeco-Roman Egypt, see Török 2005, p. 66, fig. 10.

  \item Higgins 1967, p. 100, pl. 41d. Terracotta examples are numerous, Besques 1972, p. 31, D.165, pl. 38, the type is known as well from Roman times, for example, Grandjouan 1961, p. 54, no. 391-395, pl. 8. AD 200-250, attested as well from fourth century Egyptian terracottas, Kassab Tezgör 2007, p. 209.
  \item Adriani 1952, p. 14, pl. VI.2; Gloire d’Alexandrie, no. 70; Kassab Tezgör 2007, no. 177, pl. 4b, 12f, 58a.
  \item Adriani 1940, p. 78-79, pl. XXXII.2; Higgins 1967, pl. 41 d; Gloire d’Alexandrie, no. 70; Kassab Tezgör 2007, nos. 98, 126-129, 170, 177.
\end{itemize}
the Alexandrian figurines are unparalleled anywhere and considered Alexandrian creations of local ateliers in the third century BC.\textsuperscript{128} I find it is probable that these Alexandrian terracottas and the Cairo \textit{diskophoros} were inspired by the same model, which could be a missing Alexandrian statue. The Cairo \textit{diskophoros} shows clear difference between the elegant typological confront and the less stylized execution of the body and surface treatment. The statue stands without typical parallel and recalls sophisticated sculptures of early Hellenistic period, and best confronted to conceptions and models from third century BC. The absence of the typical parallel from Egypt or a broad may confirm the originality of the proposed Alexandrian third century sculpture. It is difficult to believe that the hand which composed such sophisticated sculpture is responsible for this rough execution. This feature may suggest that the statue is a copy or second edition of unknown Alexandrian type. The hypothesized type, except the pose and hair style, is close to the common \textit{kausiaphoros} boy type. The statue with its typological peculiarities is another document revealing the creativity of Alexandrian art and its ability to give a particular taste to common Hellenistic types and norms.\textsuperscript{129} This statue perhaps belongs to same span of time which produced other Alexandrian originals like the old fisherman or the British Museum spinario, or the sculptures of the Memphite exedra.\textsuperscript{130}

## Style and Date

The dress lines show a mixture of styles; the style in which the \textit{chlamys} is worn, including the left arm inside began in Alexander’s time,\textsuperscript{131} and perhaps the Daochos I statue is its earliest sculptural attestation. Similar tightly held right hand beneath the \textit{himation} began to appear with the Mantinea base and continued with Muses and relating figures through Hellenistic and Roman era.\textsuperscript{132} The hand beneath a mantle appears in two variations: fingers and fist are stretched on the chest, or the hand is seen by side and the fist is clinched in hook-like shape. The left hand in the Cairo statue follows the second variation with side seen clinched fist, which perhaps began in the third century since it appears with terracotta \textit{kausiaphoroi} from Alexandria,\textsuperscript{133} and the Ambrakia Muses.\textsuperscript{134} Moreover the \textit{chlamys}’ neck fold in the Cairo statue does not follow the Daochos I pattern; it rather falls on the chest. This pattern is common among military figures, appears with the Aknonios statue from the same Thessalian dedication,\textsuperscript{135}

\end{thebibliography}
known in royal Ptolemaic portraits on coins\textsuperscript{136} (fig. 18). The Hellenistic funerary monuments of Macedonian officers and soldiers usually show this fashion.\textsuperscript{137} It is possible that this feature is borrowed from military sphere to stress the military future of this \textit{ephébos}, since the athletic exercises were part of the regular military training.\textsuperscript{138}

The style, in which the mantle is grasped on the right side, where its rare side overlaps its front side, is expressive and well designed. A similar drapery of \textit{chlamys} is not detected up to now, but the third century torso herm in Megara Museum,\textsuperscript{139} shows a bent right arm and most likely the missing forearm was fixing a diagonal edge of the mantle on the hip and belly. The Megara herm confirms the existence of the bent arm motive in the third century, such pose is presumed in the Alexandrian type, which was copied in the Cairo statue. Another late fourth century terracotta type from Kyramikos represents boys dressed in mantle showing very close conception. The composing is a mirror figure from the Cairo \textit{diskophoros}, and the mantle is heavily folded on the right side with the edge diagonally executed.\textsuperscript{140} This bent arm is comparable to many Muses figures, begins, again with the Mantineaia base,\textsuperscript{141} the statue of Aeschines,\textsuperscript{142} the Herculaneum women,\textsuperscript{143} private sculpture,\textsuperscript{144} funerary stelai (fig. 16),\textsuperscript{145} Tanagra figurines and \textit{kausiaaphoros} boys\textsuperscript{146} (fig. 14). The Hierapetra boy in Crete with its replicas\textsuperscript{147} is another interesting confront despite it is a mirror figure of the right arm of the Cairo \textit{diskophoros}. It is reasonable that this motive depended on sculptural models from late fourth or early third century BC, most likely the Muses groups, since neither the Daochos statue nor the Tralleis boy show such motive.

The motive denotes dignity and respect, as well as intellectuality and \textit{aidos}, especially with the edge of the mantle on the shoulder, which is rooting in representations of aged men on Attic funerary stelai.\textsuperscript{148} The subject of the statue is \textit{ephébos}, therefore belongs to high social class after his dress, well educated after his \textit{gymnasion} membership. This education is not

\textsuperscript{148} Edwards 1996, p. 144-145, n. 88, quoting Hesiod who describes Nemesis and Aidos “shrouding their bright forms in pale mantles.” The statue of Archilochos in the Louvre, shows a marching man grasping his mantle’s edge by right hand Schefold 1997, p. 94, abb.29, confirms as well the intellectual significance of this style. The Muses types frequently show this style, within different gestures, Ridgway 1990, p. 246ff, pl. 13ff.
exclusively physical one, but should have followed the Isokrates pattern of intellectual and athletic education.\textsuperscript{149} Therefore the intellectual taste in modeling the figure is very expected.\textsuperscript{150}

The boy did not leave his mantle open to expose any more of his body, but rather secured it with his hand. The conception is very different from the athletic nudity in classical times and conforms to Hellenistic conception which was expressed by the nude chest beneath \textit{chlamys}.\textsuperscript{151}

The head looking down could be another indication of \textit{aidos}, especially among \textit{ephéboi} and athletes. This virtue was much stressed in classical times to \textit{make} the future good citizen of the \textit{polis}. The head of the Cairo statue most likely was looking down, as was conducted from the Tralleis Boy, labeled by Zanker ”particularly powerful expression of Aidos.”\textsuperscript{152} Ptolemaic Alexandria with its learned and sophisticated society was able to host and develop such artistic and intellectual conceptions.

The whole appearance of drapery treatment on the left side of the proposed Alexandrian original statue, finds a good parallel in the terracotta figurine from Manara Necropolis, representing \textit{kausiaphoros} boy\textsuperscript{153} (fig. 14). The superficial treatment of the folds beneath the left elbow is similar; on both figures the triangular pattern is used, and the surface is worked into short light folds express surface tension. The vertical folds on the left side are comparable as well, but its execution on the Cairo \textit{diskophoros} is cold and schematic, even when compared to these terracottas.\textsuperscript{154} From third century as well, another Alexandrian statuette of seated \textit{chlamidophoros} presents a close style of the \textit{chlamys} treatment on the right shoulder and arm.\textsuperscript{155} The edge is following the arm and held by the hand, recalls pure intellectual conceptions.\textsuperscript{156}

The lively appearance of the tender body is remarkable, sometimes the details are traceable beneath the heavy mantle; a feature should reflect the high artistic level of the third century statue. The surface is still showing remains of the original pattern of the elegant expressive textile folds, despite its linear execution on the Cairo \textit{diskophoros}. This treatment reflects the muscular reaction of the hand against the weight of the \textit{diskos}. The grasping hands are surrounded by a group of short light folds giving natural expression of tensioned surface. The right hand is completely covered, but the textile is impressed by the grasping fingers, not only on the right leg where this hand rests but on the left leg as well.

The ropes of the slung \textit{sakkos} are expressively treated as well; the strap on the left side is moved to the forearm, and does not repeat the style of right shoulder, giving variety in treatment of such motive. The gesture is expressionist and reflects the load and the adolescent reaction of the boy athlete, most likely to avoid any expected hurt. This style is very close to the marching farmer in Alexandria,\textsuperscript{157} but best compared to a half nude boy from Myrina,\textsuperscript{158} with the mantle shifted to the forearm dates to 300-250 BC. The diagonally fallen strap on the belly is enriching the folds lines, in successful contrast to the other diagonal edge of the mantle.

\textsuperscript{150} Seated young men with mediating expression and very closely fashioned mantle are known from third century BC, see Zanker 1995, p. 90ff, fig. 51-52.

The original statue copied in the Cairo *diskophoros*, stylistically is best located in the high Hellenistic period, and finds close parallel among terracotta boys from third century BC (fig. 14). Many third to second centuries’ genre figures present the closest conception of the slung *diskos* on the back side. The style of left arm held to the chest, seems of remarkable fortune within third century BC. In addition to the Alexandrian terracottas, a third century bronze plaque from Galjub shows this motive with different pose of the right arm. The gesture is repeated in the Ambrakia Muses group known from Roman moulds and coins, but the original is dated to third century BC. Within this century, I prefer to date the Alexandrian type, copied in the Cairo *diskophoros*. It is less likely that the Cairo *diskophoros* is the original type with its incorrect proportions and deformed execution, even without a support. The proposed original Alexandrian type was carved earlier, perhaps in the last quarter of the third century.

The sculptor of the Cairo *diskophoros* seems of medium level, despite his ability to copy highly stylized models and transfer pure Greek conceptions and motives into an Egyptian hard stone like granite. The body lines are rigid and less harmonious and the right side is unnaturally treated, where a linear rough furrow separates the covered arm from the body. The side views show less stylized treatment; the *chlamys* rigid lines dominate the body modeling in many parts, especially the chest, which does not show any flesh details. The shoulder hardly, is recognized from the body and the whole composing is lacking depth. The right arm is treated asymmetrically; the volume of the forearm is very narrow and contradicting the wide elbow beneath the mantle. The arm line follows the mantle edge on the bare part of the body and its whole appearance should be labeled disproportional.

The left arm and hand which are supposed to copy highly stylized model are executed in the same asymmetrical and disproportioned values. The details of the arm are merging into the body and the forearm seems as additional mass of stone to the body, while the elbow is smaller in volume and disproportioned in appearance. The lower part of the body seems disproportioned and squeezed, owing to the tightly held mantle on the right side. The feature should have been copied after the third century model, as confirmed by many Post-Tanagra Alexandrian terracottas, which however are still showing the lively proportions of the lower part of the body. This deformed appearance is owing to the medium ability of the Cairo *diskophoros* sculptor, or perhaps generations of copies that are still unknown.

The style of wearing the *chlamys* and surface execution recalls middle to late Hellenistic conceptions, and best compared to terracotta and funerary steleis. The flat dry surface of the statue is comparable to a *chlamidophoros* figure on a funerary stele perhaps from Smyrna, dated to middle second century BC. The figure shows similar sketchy treatment of the folds and left arm within its relation to the surface. The folds on the right leg of the Cairo statue, in their circular pattern and linear execution find close parallel in Alexandria funerary stele of Ptolemaeos in Amsterdam, dates to first century BC.
The diagonal folds between legs are comparable to Post-Tangara statuette from Hadra, the fresher lines should predate the Cairo diskophoros with its static lines and suggest a date in the first century BC for the later\(^{165}\) (fig. 15). This style of wide grooved folds, is very comparable to another stele from Smyrna, dates between 150-100 BC\(^{166}\). The figure is wearing himation, but the left arm is bent and the end of textile is held in similar style to the Cairo statue. Grooved folds appear between legs corresponds to the fingers on the left side. Closer in execution and technique is another Egyptian late Hellenistic chlamidaphoros figure in farewell scene with similar diagonal flat folds concentrated around the grasping hand.\(^{167}\) The surface is turned into schematic rough flat grooved folds, mostly similar in its reflection of the grasping action.

The style of executing the right hand where it is clinched, resting on the thigh with its outer surface facing the seer, is very comparable to an inscribed funerary stele from near Smyrna dates between 150-100 BC\(^{168}\) (fig.17). The right arm is partially enveloped in the mantle leaving a small portion of the forearm exposed. The serious difference between the two figures is the mantle treatment below the clinched hand: where the textile is flaring on the funerary stele while its two edges are closed together on the Cairo statue. The chlamidaphoros athlete on a funerary stele from Canopus (fig. 16),\(^{169}\) presents close style of the right arm, in its pose relation to the mantle edge. The triangular form of the two edges of the mantle on the right shoulder is very similar. The stele with its more worked and less dry surface, should predate the statue, but still valid to suggest a date in the first century BC. A later date could be proposed after a terracotta female statue in Alexandria, most likely depended on sculptural model.\(^{170}\)

The statue shows fresher lines and richer dynamic execution reflect the action of a covered right hand grasping the mantle. This highly stylized motive is contrasting its counterpart on the Cairo diskophoros with its rigid lines and more static surface, and suggests later date for the statue. The terracotta figurine is dated to late third or early second century BC, close to the proposed Alexandrian type, which is presumably copied in the Cairo diskophoros.

Two late Hellenistic terracottas from Chatby,\(^{171}\) present the same dry static surface, and rigid lines of drapery. The frontal pose is used and the left arm adds more volume to the body where details are mostly absent beneath the chlamys. The treatment of neck fold is similar and the twist of the mantle edge on the right arm is more open on the terracotta type but still shows closer conception. The type belongs to the Post-Tangra group with its conic headgear, bulky execution and less modeled body. The dry treatment of the surface on the Cairo diskophoros finds close parallel in a specific Cypriote type of cult servant dates to the first century BC. The type shows a standing boy dressed in chlamys and left hand tightly held to the chest. The affinities to Egypt after the shaved head are apparent and it is already connected to Isis cult.\(^{172}\)

\(^{165}\) Breccia 1930, p. 37, no. 110, tav. XI.1. The statuette shows a different drapery of the chlamys in addition to a different hair style, that should locate it after the late third century BC, for Post-Tangaras, see Kassab Tezgör 2007, p. 248ff.

\(^{166}\) Pfuhl-Möbius 1979, no. 158, tav. 35.

\(^{169}\) Schmidt 2003, Kat. 48. It is noticeable that the style of holding the dress with a bent arm and hand enveloped inside the same dress appears frequently on funerary stelae from late second and first centuries BC. See Schmidt 2003, no. 46; second to first century BC from Egypt, from Delos, Couilloud 1974, no. 304, pl. 59; from the Greek east, Pfuhl-Möbius 1979, nos.164-166.

\(^{170}\) Kassab Tezgör 2007, no. 252.

\(^{171}\) Breccia 1930, p. 37, no. 114, pl. LV.14, similar type is pl. LV.16.

\(^{172}\) Queyrel 1988, p. 119ff, no. 377-387, pl. 38.
The surface lines are poorly executed and the whole appearance is close to the Cairo *diskophoros*. Another Cypriote sculptural type dates to the end of Hellenistic period may support a date in the first century for the Cairo *diskophoros*. The type shows a mirror *himation* figure with similar summarized static surface and rough flat grooved folds with plain backside.\textsuperscript{173}

The style of the left hand with its fist clinched in hook-like shape, seen by side already has been traced till third century BC. The motive is frequently attested in the second century BC as well. First of all, is the Muse with kithara in the upper row of the Homer apotheosis relief, dated around 125 BC,\textsuperscript{174} and 150 BC.\textsuperscript{175} Funerary stelai show the same motive as well: the *Chamidophoros* athlete from Egypt\textsuperscript{176} (fig. 16), and other examples from the Greek east, perhaps Smyrna, date to middle second century BC.\textsuperscript{177} The same style is found on many Post-Tanagra statuettes from Alexandria, date after the last quarter of third century,\textsuperscript{178} and many torsi herms from Delos date to second century BC.\textsuperscript{179} The treatment of this hand is slightly different owing to the rope passing inside, and it is still closer to third century style best compared to Alexandrian Kausiaphoros\textsuperscript{180} (fig. 14). This motive, perhaps, depended on the third century statue.

An interesting feature in the Cairo *diskophoros* that should not be ignored in the chronological question is the clasp on the right shoulder. The elongated form is rare and very distinguishable from the round Roman ones.\textsuperscript{181} The shape is different from buttons and round fibulae used by Greeks to fasten both male and female dresses.\textsuperscript{182} The Byzantine period fibulae are characterized in the famous cross-bow type.\textsuperscript{183} The Ptolemaic evidence for fibulae and clasps is fragmentary, and I have hinted the paucity of draped royal figures, except small bronzes, showing however, the round fibula.\textsuperscript{184} Ptolemaic coins are helpful when the design is well preserved, where two ends of a cloak like *aegis* are simply fastened,\textsuperscript{185} or buttons are clearly used with *chlamys*.\textsuperscript{186} A third method appears on these coins, showing the clasp technique.

A golden coin of Ptolemy V shows a metal clasp with two round ends penetrate his *chlamys* on the shoulder.\textsuperscript{187} The shape is different from that one on the Cairo statue, but presents closer model to the elongated clasp. A similar object appears on a coin of Ptolemy IV in Glasgow.\textsuperscript{188}

Most interesting is a coin of Ptolemy V in London, showing a metal clasp with round top and flat stud. The clasp is typically fastened like the one on the Cairo statue but placed its up-down (fig. 18). The type of these clasps is close to the Cairo statue, but is not decisive evidence to suggest a secure date. It is difficult to decide, if the clasp belongs to the third century original statue, or to the later copy in the Cairo diskophoros. A similar conception of bar-shaped clasp with spirals appears on the funerary bed plaque in the Telephos frieze from Pergamon dating to second century and perhaps around 160 BC, therefore supports a Hellenistic context for the clasp type (fig. 19). The Pergamene evidence accords to the clasp type on the Epiphanes coins, but both are still helpless to decide a date.

The execution of the statue is very different from Roman natural proportions; the indefinite body is sunken beneath the chlamys. This inferior treatment is apparent when compared to similar figures from Roman date from Egypt, Italy and Cyrenaica. Therefore a Roman date seems improbable, and the elongated clasp does not appear in Roman times. The stylistic analysis appoints out that the second half of the second century and the first century show many comparable sculptures, terracotta and funerary stelai in style and execution. The less stylized surface and disproportional execution of the Cairo statue may favor later date and suggest the first century BC.

**Function and Archaeological Context**

The Cairo diskophoros therefore is a copy, or a later edition of a remarkable sculptural original type, its function as ornamentum in a gymnasium is very probable, and such buildings are well documented in Ptolemaic Egypt. The small scale reduces the portrait probability, but does not exclude it. The statue is 30.5 cm and its original height will not exceed 50-55 cm. The Cairo statue most likely was carved to celebrate a remarkable victor in diskobolia, or celebrating a member of Greek elite beginning his ephebeia, which increases the probability of a portrait statue. The statue with the diskos on his back should have been exhibited to be seen from

---

189 Poole 1883, p. 74, no. 62, pl. XVII,5; from the same series, p. 74, no. 68; the Romanized type of Cleopatra coins shows her in a chlamys fastened with dolphin-shaped fibula. Kyrieleis 1975, taf. 107.2. The clay seal impressions from Edfu and Nea-Paphos are not helpful, after the small size and the less detailed design, but they show chlamys fastened with a fibula or buttons. Milne 1916, pl. IV, V; Kyrieleis 1975, taf. 54-55; Smer 1989, fig. 37, 38; Kyrieleis 1990, p. 456-457, taf. 67; Kyrieleis 1996, p. 315-320, pl. 54-62; Stanwick 2002, fig. 234-239. The engraved gems with Ptolemaic royal portraits, when design is well preserved show the button type of such clasps, see Plantzos 1999, p. 113ff, nos. 1-50, pls.1-9.

190 I owe to the anonymous referee for this remark.

191 Pollit 1986, p. 199, fig. 213; Dreyfus 1997, p. 74, cat. no. 12; Ridgway 2000, p. 57ff; Round fibulae appear as well on this frieze, see Andreae 2001, no. 119.

192 Adriani 1961, no. 124, pl. 66, fig. 210; Keith 1975, no. 46.

193 Von Steuben 1972, p. 154, taf. 36, 1-2; De Lachenal 1979, p. 148, no. 103; Andreae 2003, p. 61, abb. 15.

194 Huskinson 1975, no. 119, pl. 46.

195 The head is expected to reach 7-8 cm in height, which is close to some known portraits from Egypt in minor scale, like the Ptolemy Epiphanes portrait in Cairo, 14 cm, see Quevrel 2003, p. 481, no. 8, p. 489, fig. 15, 16; The small bronze bust of Ptolemy XII in Paris, see Grimm 1998, abb. 121 a, b; Stanwick 2002, p. 60. Close in the early Roman period, there is the Augustus head from Alexandria 3 cm, see Kiss 1984, p. 36, fig. 42-43. The Severus two heads in Alexandria 12 cm and Frankfurt 10.5 cm Kiss 1984, p. 73, fig. 183-184, p. 78, fig. 199. Some portraits on Egyptian herms reach 4 cm in height, see Keith 1975, p. 64.
all sides to message the identity of the subject. The original statue, as well, perhaps was celebrating a remarkable victor athlete, such hypothesis does not conform to any candidates, except Nikostratos the victor pentathlete, or a young king perhaps child, like Ptolemy V.

Material

The use of Egyptian local hard stones in Greek style sculptures is interesting, and the Cairo diskophoros sculptor followed an original Ptolemaic tradition; known as early as third century BC. The Alexandrian Nile statue was carved in basalt and attributed to Philaelphus’ reign, after a second century copy in Stuttgart. A red granite head represents Alexander, perhaps in the Kristēs type. The basalt veiled head in Boston from third century funerary relief, show the use of such material in private sculpture as well. A basalt head of Marcus Antonius from near Canopus, in the Bankes Collection, is interesting for its date 40-30 BC and subject. Many torsi and pillar herms from Hermopolis and Alexandria are known in dark grey and black basalt.

Such feature is known as well from Roman times, the black basalt Augustus bust in Boston, supposedly to be carved in Egypt, is remarkable. The green basalt cuirassed bust of Germanicus in London, and another small cuirassed figure with unknown provenance in Cairo, are interesting attestations of such type. Basalt and grey granite Palliati statues are

196 I am grateful to the anonymous referee to change my suggestion from a niche to this conclusion.
197 It is a pure matter of speculation if one may arouse a question that the third century original statue might represent Nikostratos the only known Egyptian winner of the boys pentathlon in the Asklepeia at Kos, Klee 1918, p. 6, lines 13-14; Remijse 2009, p. 256, n. 44. The event is dated in the second half of the third century, or around 200 BC, close to the proposed date of the original Alexandrian statue. The Koan inscription is just a list of victors by name, city and profession, and nothing else. The carving of a statue in athlete’s home city is a well-known Greek tradition, but in the Nikostratos case and the Cairo diskophoros nothing further could be confirmed.
198 Ptolemaic court showed an active patronage of athletics and the possibility that the statue could memorialize a little prince or child king in typical Macedonian ephetic attire is possible. It is another speculation but finds a literary support in a victory recorded by Ptolemy Epiphanes around 191 BC in the Panathenea. Epiphanes won the armed double course in foot race which connects him to pentathlon. Ferguson 1908, p. 355; Peremans-Van’t Dack 1968, p. 294, no. 17232. Epiphanes’ skills in hunting, riding and using weapons were once commented by Polybius, and the training of the boxer Aristonikos is debated among scholars to be shifted to his reign, Pleket-Stroud 1984, p. 73; Hölbl 2001, p. 142, n. 76, not his father Philopator, see note 65.
200 Kácovs 1982, p. 292, n. 21; Moreno 1994, p. 126, the statue was seen by Pliny in Templum Pacis in Rome, dedicated by Vespasian.
201 Bianchi 2007, p. 29ff, especially p. 38, fig. 3-4, said to have come from Hermopolis.
202 Vermeule-Newman 1990, p. 41, fig. 3-4, a similar head from ca. 100 BC, attributed to unknown Ptolemaic queen. Grimm-Wildung 1975, p. 132.
204 Kyrileis 1975, p. 51ff.
206 Walker-Higgs 2001, no. 16.
207 Kiss 1984, p. 29, fig. 22-23; Vermeule-Newman 1990, p. 41ff, fig. 5-6; Walker-Higgs 2001, no. 261.
208 Keith 1975, no. 2, pl. 2; no. 6, pl. 5; no. 7, pl. 6.
211 Edgar 1903, p. 27496, p. 27 pl. XIII.
known from Arment and Edfu in Upper Egypt. A statue of a wine seller in Ismailia Museum, carved in grey granite, is another manifestation of such phenomenon. The black granite statue of a man holding a crocodile and dressed in himation and Greek sandals, from Fayuum, perhaps a God or a priest, but once was thought to represent Septimius Severus. Two small figures in schist and another Egyptian hard stone from Koptos in Cairo represent Hermes or gladiator and athlete, show pure Greek conceptions and styles.

These sculptures do not leave any doubt that Hellenistic sculptors in Egypt had the ability at least from third century BC, to model Egyptian hard stones into Greek subjects and styles. This plenty of such sculptures from Ptolemaic Egypt, however is not decisive evidence to suggest if the sculptor was native Egyptian or Greek. It is helpless as well, to speculate the material of the original statue since one example at least; the Nile statue shows an original Greek style sculpture carved in basalt.

Alexandria itself has shown recently that its harbor was heavily decorated with sculptures in granite and marble. Such hard stones were used by Ptolemies even in their dedications in the Greek world, like the columns carrying statues of Philadelphus and his wife in Olympia. The carving in one piece of granite, in addition to the absence of any Alexandrian piecing and stucco techniques, may favor a local workshop in the chora for the Cairo copy.
