The Book of Caverns in Theban Tomb 33: Late Period Reception Process and Individual Adaptation
Le présent article résume, met à jour et complète les précédentes recherches de l’auteur sur la copie du Livre des Cavernes dans la tombe thèbaine du prêtre lecteur en chef Padiaménopé (TT 33), datée du début de la Basse Époque (XXVe-XXVIe dynastie). La première partie est consacrée à la réception du Livre à la fin de la Troisième Période intermédiaire / début de la Basse Époque. Nous avons pu mettre en évidence que la source de la copie de Padiaménopé était le résultat d’une recherche « archéo-philologique » : la collation d’une copie reliée à la version de l’Osiréion, ainsi que d’une copie de la tombe de Ramsès VI (KV 9). Une série d’éléments démontre que la réception du Livre reposait originellement sur la volonté d’une reproduction « authentique » (bien qu’amendée par des ajouts au bénéfice du défunt), ce qui n’excluait pas pour autant les variantes, la mise à jour et la créativité. Outre les indispensables mises à jour d’ajouts (personnalisés à la fois dans le texte et l’iconographie) qui furent originellement créées pour les rois ramesides, on rencontre des changements modérés dans l’orthographe, le vocabulaire et la grammaire, de même que de légères modifications dans les scènes. On peut en outre identifier quelques rares cas de changements d’ordre textuel, de conjectures et d’additions. La seconde partie de l’article présente et discute le modèle sophistiqué de la version du Livre des Cavernes sur les parois des salles XVII à XIX de la tombe TT 33, qui reflète « indexicalement » (C.S. Peirce) le voyage du dieu soleil – et avec lui, celui de Padiaménopé – d’ouest en est à travers l’au-delà.

ABSTRACT

This article summarizes, updates, and adds to past research performed by the author on the copy of the Book of Caverns in the early Late Period Theban Tomb 33 (TT 33) of the chief lector priest Petamenophis. The first part is devoted to the reception of Caverns in the late Third Intermediate Period / early Late Period. It describes the source of Petamenophis's copy as being the result of an “archaeo-philological” endeavor: a collation of a copy related to the copy in the Osireion and a copy from the tomb of Ramesses VI (KV 9). A series of sections discusses the reception as being primarily shaped by the aim for an “authentic” reproduction (notably with additions to the benefit of a deceased), however, also by emendation, update, and creativity. Besides the necessary updates to the personalized textual and pictorial additions that were originally created for the Ramesside kings, we find moderate orthographical, lexicographical, and grammatical changes, as well as a few changes to the images. We can also identify a few cases of textual emendations, conjectures, and additions. The second part of the article presents and discusses the sophisticated layout of the copy of Caverns on the walls of the rooms XVII–XIX in TT 33, which indexically (C.S. Peirce) mirrors the journey of the sun god—and with him Petamenophis—from west to east through the netherworld.

Keywords: Book of Caverns, TT 33, Petamenophis, Late Period, reception, textual additions, archéo-philology, collation, decoration, orientation.

1. INTRODUCTION

All three Underworld Books from the New Kingdom, i.e., the Amduat, the Book of Gates, and the Book of Caverns (henceforth simply “Caverns”), made it into the Late Period Theban Tomb 33 of Petamenophis. The topic of these books is the travel of the sun god through the underworld and, more importantly, his interactions with its inhabitants. The books include images, annotations to the images, descriptive texts, offering statements, and/or litanies. Furthermore, some copies exhibit personalized additions for the respective book “owners.” Originally, Caverns has to be imagined as a long papyrus with seven large image tableaus.

---

including ca. 80 scenes and accompanying texts. Between the tableaus, there were long texts, which included 21 “great litanies” (see figure 1). There are hints that these papyri were written in cursive hieroglyphs with some hieratic sign shapes.

The topic of this article is the copy of Caverns in TT 33. It is one of a dozen true-to-original text attestations—henceforth, in terms of textual criticism: “text witnesses”—of this Underworld Book that we know of today. From a modern philological perspective, it is one of the three very important ones (in addition to those in the Osireion [tO] and in the tomb of Ramesses VI [RVI]), since it is a complete and largely intact copy. It is simultaneously a very interesting text witness, since it testifies for some “archaeo-philological” endeavors that took place shortly before or even during the time of Petamenophis and the creation of his tomb TT 33. Furthermore, it sheds light on the reception process of Caverns in the early Late Period. Generally speaking, this reception can be described as “authentically reproducing.” However, we also find some remarkable instances of intentional grammatical updates, textual emendation, and textual and pictorial collation. This article is partially a summary of results from different earlier publications by the present author. It focuses on Caverns in TT 33 and discusses certain findings that have not been highlighted before. In addition, some photos and line drawings from TT 33 are published here for the first time.

Firstly, we look at the interesting reception process of Caverns in the Late Period (section 2). Afterwards, I present and discuss the layout of Caverns on the walls of the rooms XVII–XIX of TT 33 (section 3).

5 Werning 2011, vol. 1, ch. II; additions in: Werning 2017, fig. 2 (p. 4). For some more texts or images that are results of a creative reception of Caverns, see Werning 2017, pp. 59–61.
6 See section 2.1, below.
2. RECEPTION OF Caverns IN THE EARLY LATE PERIOD

With the help of the method of textual criticism, we are often able to classify and date deviations that we observe in various text witnesses of the Underworld Books more precisely. In addition to applying this method to texts, we can also fruitfully apply it to images, as demonstrated in Werning (2011, vol. I, ch. III). The method of textual criticism works best for textual histories that (i) are completely reproductive, i.e., non-creative, and (ii) have not been subject to any acts of collation of manuscripts, i.e., in which copies have always been drawn from one and only one model. In case of very creative transmissions or collated texts, the method cannot be easily applied. However, if one can pinpoint the acts of collation and creativity, i.e., if one can describe in which parts and under which circumstances they happened, one can still apply the method in a fruitful way. Fortunately, these requirements are met in the case of the textual history of Caverns.

2.1. The source of Petamenophis’s copy: an archeo-philological endeavor

Elsewhere, I have argued that a text critical investigation of the text witnesses of Caverns reveals that Petamenophis's copy was the result of what I suggested calling a “archaeo-philological” endeavor that took place in the early Late Period, in the later 8th or 7th century. More specifically, I showed that the version in TT 33 was the outcome of a collation of two copies of Caverns. It seems, however, that it was a quite selective collation process. In this section, I summarize the basic arguments.

The main text of Caverns comes from a copy related to the text witness in the Osireion (tO, late 13th century BCE). On the other hand, certain textual additions to the main text, which relate the deceased to the circumstances described in this Underworld Book, are adaptations of a set of basically identical personalized additions that are attested in the text witnesses from the Valley of the Kings (copy γ; tombs of Ramesses IV, VI, VII, and IX, 12th century BCE). Both parts were combined. However, it seems that the core text of Caverns, i.e., the text proper without the personalized textual additions, from the Osireion, has normally not been checked against the texts from the branch of the Valley of the Kings, i.e., it has not itself been collated. The scenario can nicely be exemplified by the case of the great litanies in Caverns (figs. 2 and 3).

---

7 See Werning 2011, vol. 1, ch. III.A (pp. 51–53) with references.
8 For the reception of Caverns in general, see Werning 2017.
9 Werning 2011, vol. 1, ch. III.C.6 (pp. 68–73). See also the discussion in Werning 2011, vol. 1, p. 73 (“Nebendiskussion 2”). For the term “archaeo-philologist,” see also Werning 2017, p. 48. For a terminus ante quem non, based on the spelling of the theonym “Osiris,” see the footnote before Ex-9 in section 2.2.2 below.
10 Werning 2011, vol. 1, ch. III.C.4 (pp. 64–66).
12 For an exception, see table 2 in section 2.2.4 below.
As illustrated in figure 2, the copy in TT 33 attests the complete set of 21 great litanies. However, there are text additions to only a selection of them. Moreover, some litanies with additions don’t have additions to all of their verses but only to some of them. Now, this pattern of additions (but not of the verses) is nearly exactly the fingerprint of the abbreviated attestations of the litanies’ verses (including their additions) in the tomb of Ramesses VI (KV 9).13

That the main text came from the branch from the Osireion (β) and the text additions came from the branch of the Valley of the Kings (γ) is also very obvious when we look at the spelling of the root *ḥtm “to destroy” in some litany verses and their additions.14 Compare figure 3 (photo of the yet unpublished text witness in TT 33: fig. 4).

---

14 Hb. 25.21², similarly in Hb. 80.3³⁷, 80.3⁵³, 80.3⁷³, […], 80.4⁹² (but all “harmonized” to the standard bird in 80.5³², […], 80.5⁵³, and displaced 80.3³⁷).
While the text witnesses, notably also the Osireion branch (β), always have a standard bird shape for the phono-repeater, the text witnesses in the Valley of the Kings, especially the tomb of Ramesses VI, exhibit the New Kingdom shape. In accordance with the additive collation technique (combination), in TT 33, we find the standard shape in the main text (from the Osireion branch) and the New Kingdom shape only in the text additions (which come from the Valley of the Kings branch).

When it comes to the images, however, a more complex pattern emerges. At least occasionally, the Late Period scribes truly collated the two model copies, i.e., two copies of an image were compared and, if there were obvious differences, the more plausible or more “fitting” details were chosen for a merged new version. This is especially obvious in the case of scene XXI (fig. 5).

Scene XXI displays a casket of Osiris with some gods and emblems around it. The original version had four adoring gods standing around the casket. In TT 33, however, the scene exhibited two additional gods, for a total of six (though one of them is destroyed today, see figure 6). Now, we find the same mistake—the text literally speaks about “four gods” (*Hb. 24.17*)—also in, and only in, the tomb of Ramesses VI. It was obviously in the context of this specific text witness, i.e., the tomb decoration of Ramesses VI, that the mistake was made. The scene is located partially inside a niche in the wall and partially outside the niche (fig. 7). At the very edge of this niche, the decorators accidentally doubled two of the adoring gods in front of the casket. This is why Ramesses VI exhibits *six* instead of four adoring gods. It is most unlikely that this particular mistake could have happened a second time independently. This strongly suggests that a copy directly related to the tomb of Ramesses VI served as one source for the images in Petamenophis’s copy.

16 Werning 2011, vol. 1, pp. 68–69 with fig. 6.
This source copy, however, cannot be the only one. This becomes obvious when one examines another aspect of the same scene, the scene XXI. Namely, it happens to be the case that all text witnesses from the kings’ tombs exhibit a common mistake. Originally, the round black discs in front of the four “necks of Ra” had some kind of red rays coming down from them. In the master copy γ for decoration in the Valley of the Kings, the copyist accidentally forgot or overlooked these red rays and left them out. So, if the Late Period scribes had used a copy from the kings’ tombs as the only source, Petamenophis’s copy would have lacked the rays as well. However, this is not the case. It includes the rays, which the scribes obviously collated from the other copy that they used, i.e., their copy from the Osireion.18

18 Werning 2017, pp. 44–46; Werning 2011, vol. 1, p. 68. Moreover, we find two other specificities in scene XXI in RVI also in TT 33: a 4th red sun in front of the heads of Ra and a flipped orientation of the casket. As opposed to the addition of two more gods, however, these could possibly have happened independently (although I don’t believe that they did).
Another phenomenon points to the same scenario. Some of the images in the 3rd tableau in TT 33 display a layout very similar to the compressed layout in the tomb of Ramesses VI (see figures 8 and 9). At first sight, this looks like a direct copy from the RVI version. However, a closer look reveals that the scribes predominately followed the copy from the Osireion branch as far as the details are concerned. In scene XXXIII (fig. 9), for example, the orientation of the snake and its “content” in TT 33 form a faithful mirror image of the Osireion version, in line with the reversed reading direction in TT 33, and therefore does not simply copy the RVI version, which uses the opposite orientation. Similarly, in scene XXXVI (fig. 10), the Osireion and TT 33 share the upright orientation of the “enemies,” as opposed to the upside-down orientation in RVI. It seems that it was, basically, the idea to stack some figures above each other which had been taken over by the early Late Period author. Note that, in the case of scene XXXVI, the stacking has been applied to some figures independently of any model.

a. From Frankfort 1933, pl. XXXIII, XXXII (indications of colors removed).
b. CC BY-SA 3.0 DE, © Daniel A. Werning (line drawing by Antonio Cantele, collated by and based on orthophotos from D.A. Werning; partial reconstruction of Fig. 10b by D.A. Werning).
Altogether, this and further evidence\(^9\) show that the Late Period copy (\(\zeta\)), which the text witness of Caverns in TT 33 comes from, was a collation of a copy connected to the Osireion\(^{20}\) copy and another copy connected to the copy in the tomb of Ramesses VI. The core text seems to have been taken from the Osireion branch, the text additions came from the tomb decoration of Ramesses VI, and the images were collated from both sources (with the copy from the Osireion branch, it seems, as the more trusted source).

The case of Caverns in TT 33 also contributes to the question of whether the scribes of the Late Period “renaissance” were using secondary copies drawn from the finished monuments or whether they had copies of the original “master copies” for the decoration of these monuments. Since the mistaken number of six adoring gods can only be explained by the very specific architectural setting of the niche in the tomb of Ramesses VI (see above), I believe that the RVI-related copy was a copy drawn from the finished tomb of Ramesses VI itself. I suggest calling this surely costly process of copying texts from much older monuments an “archaeo-philological” endeavor. In the case of the Osireion copy, on the other hand, there is no comparable hint about the particularities of the finished decoration in the entrance corridor of the Osireion. At the current state of research, it therefore may seem more reasonable to assume that this was (a copy of) the original master copy for the decoration of the Osireion that made it into the early Late Period and served as the other input for the collation (fig. 11).\(^{21}\)

\[\text{Fig. 11. Collation of copies for an early Late Period tomb decoration copy of Caverns. Updated version of Werning 2017, fig. 5 (p. 48).}\]

Naturally, we would like to know whether it was Petamenophis himself who launched the archaeo-philological endeavor. After all, he was what one may call the chief ritualist of his time, obviously in charge for important religious documents, and he was also connected to Abydos. Consequently, he most probably had the possibility and authority to initiate and direct such a project. On the other hand, there was also the roughly contemporary copy of Caverns in the tomb of Monthemhet (TT 34). Unfortunately, it is almost entirely destroyed, so that it is methodologically impossible to place it in the transmission stemma. In addition, the tricky question of the relative dating of the decorations in TT 34 and TT 33 is not yet solved. However, since both tombs are located at the same place and are nearly contemporary, it is not unlikely that Monthemhet’s copy was connected to the Late Period copy ζ’. So while, under certain circumstances, it could have been an archaeo-philological project of Petamenophis that resulted in TT 34 and TT 33, it could also have been a project of someone else. The task of collating the personalized text additions was obviously an act that specifically aimed at a tomb decoration. And the replacement of the name of the beneficent in these additions was, of course, executed for Petamenophis specifically.

2.2. The reception process between authentic reproduction, emendation, update, and creativity

Generally speaking, we find that text and images of Caverns have been transmitted from the 13th century as basically authentic reproductions. However, in addition to some lapsus, which inevitably occur during copying processes, we also find some intentional updates and conjectures/emendations, as well as a creative addition.

2.2.1. Update of the personalized textual and pictorial additions

The most obvious and mandatory “update” is the replacement of the titles and names of the king in the text additions by those of the new beneficiary, in this case, “(the chief lector priest) Petamenophis (—justified).” Somewhat more demanding was the substitution of the images of two kings and their names at the beginning of the 1st image tableau of Caverns.

22 Compare the titles br(i)-hcb br(i)-dp “chief lector priest,” br(i) n(i) mdw(w)-nṯr “master of the secrets of the hieroglyphs” and zẖ mḏȝ.t-nṯr “royal scribe of the divine books;” see the discussion in Werning 2011, vol. 1, pp. 43f. with footnotes.

23 Compare the title zẖ ḫw.t-nṯr “scribe of the temple of Osiris, lord of Abydos” (Werning 2011, vol. 1, p. 44 with n. 103; for the indeed correct spelling of ḫw.t, see the photo in Régen 2018, fig. 10, p. 176). For more, probably not coincidental links to Abydos, see Régen 2018, p. 167.

25 Confirmed during a visit to the tomb in 2012, upon invitation by Prof. Louise Gestermann (mentioned in Gestermann, Gomaà 2018, p. 160).

27 Werning 2017, p. 49f. Einaudi 2018, p. 118 points out that the same appears in Der König als Sonnenpriester (see Assmann 1970, pp. 16, 17–19 [text G]).
of Caverns in the Osireion (and only there), king Merenptah was placed before the sun god in scene II. In addition, another king was inserted behind Ra, entering the underworld together with him. The corresponding part of the tableau with king Merenptah is destroyed in TT 33. However, the king—“justified with Ra”—behind Ra was substituted with Petamenophis himself, as clearly identified by the caption “The chief lector priest, Petamenophis—justified” (compare the figures 12 and 13). Above this scene, a newly composed text was added (see section 2.2.5 below).

**Fig. 12.** Line drawing of the beginning of the 1st tableau of Caverns in the Osireion. From Frankfort 1933, pl. XXIII.

**Fig. 13.** Line drawing of scene II in TT 33 (room XVII, west wall). CC BY-SA 3.0 DE, © Daniel A. Werning (line drawing by Antonio Cantele, collated by and based on orthophotos from D.A. Werning).

Besides the update of the personalized additions, we also find some changes to the core text, which we explore in the following section.
2.2.2. Orthographical, lexicographical, and grammatical changes

In this section, we are going to explore intentional changes to the core text of Caverns in the course of Late Period reception: systematic orthographical changes, changes of lemmata, as well as morpho-syntactic changes. It is largely a reprint of Werning 2017, section 6.2.2.\(^\text{28}\) It is important to remark that the content of the text is almost never changed in a substantive way. These changes may, therefore, be classified as updates. It seems to be the purpose of these updates to make the text slightly easier to understand. Often the new spellings, words, or grammatical features seem to be closer to the Late Period Égyptiens de tradition\(^\text{29}\) than the original ones.

First of all, we find some characteristic hieroglyphic renderings of sign shapes in TT 33:

\begin{itemize}
  \item [(Ex-1)] \(\dagger\) (Hieroglyphica no. D129), besides \(\text{-}\) (source copy probably \(*\text{mr}\));
  \item [(Ex-2)] \(\text{-}\) (Hieroglyphica no. I24), once for the lexeme \(\text{pr(i)}\) “to come forth”;
  \item [(Ex-3)] \(\text{-}\) (Gardiner no. N38 and variants), besides \(\text{-}\) (source copy probably \(*\text{mr} / *\text{mm}\));
  \item [(Ex-4)] \(\text{-}\) (Gardiner no. W12) instead of \(\text{-}\) (source copy probably \(*\text{mr}\).
\end{itemize}

The last shape resembles a form that is commonly held to be characteristic for the time of the Old Kingdom (2nd half of the 3rd millennium BCE).\(^\text{30}\) However, it may also simply reflect characteristics of the cursive hieroglyphic model (\(\text{mr}\)).\(^\text{31}\)

We occasionally find the graphical merging of two signs into a single combined sign:

\begin{itemize}
  \item [(Ex-5)] \(\text{-}\) in \(\text{hnz}\) “to transit” and \(\text{is}\) “to hurry” (cf. Gardiner no. O35; note that the function of \(\text{is}\) is still equivalent to \(\text{-}\)),
  \item [(Ex-6)] \(\text{-}\) in, e.g., \(\text{bfr.}\) “light” and \(\text{mfr.}\) “shine” (cf. Gardiner no. N8).
\end{itemize}

The occasional omission of the grammato-classifier\(^\text{32}\) [PLURAL] in personal pronouns ultimately seems to emulate orthographic habits of the 3rd millennium BCE:\(^\text{33}\)

\begin{itemize}
  \item [(Ex-7)] \(\text{-}\) \(\text{tn}\) \(\text{-}\) “you, your (IPL).”
\end{itemize}

\(^{29}\) The plural form “Égyptiens de tradition” is meant to highlight the phenomenon that there are different varieties of grammar in the corpus of texts that is commonly labeled as “Égyptien de tradition,” cf. Vernus 1982: “J’ai proposé d’appeler ‘Égyptien de tradition’, ou, plus précisément, mais moins commodément, ‘Égyptiens de tradition’ ces langues mimétiques d’un état révolu;” note, however, that P. Vernus does not normally use the plural form; cf. Vernus 2016.

\(^{30}\) See Gardiner 1957, p. 529 (W12). Cf. the attestation of \(\text{-}\) (Y2) in text witnesses from the 6th century BCE (Der Manuelian 1994, p. 66).

\(^{31}\) The cursive hieroglyphic sign shape are taken from various sheets of the papyrus of Ani from the 19th Dynasty (Budge 1913).

\(^{32}\) For the term “grammato-classifier” (German “Grammato-Klassifikator”), see Werning 2011, vol. 1, pp. 102–104 (§6).

Another spelling change concerning the grammato-classifier [1ST PERSON SINGULAR] is in line with orthographic habits of Égyptiens de tradition of the 1st millennium BCE:\textsuperscript{34}

[Ex-8] $\overline{\text{w(i)}}$ → $\text{[iSG]}$ in $\text{w(ỉ)}$ and for $\varepsilon(i)$ “I, me, my.”\textsuperscript{35}

An informative orthographical change attested in the copy in TT 33 is the spelling of the theonym “Osiris” with the classifier $\text{[divine]}$. It points to the later 8th century as a terminus ante quem non for at least parts, if not most, of the following changes, i.e., the reception process as a whole.\textsuperscript{36}

[Ex-9] $\overline{\text{ḥsr}}$ → $\overline{\text{ṣfr}}$ “Osiris.”

For selected lemmata, we find changes towards characteristic logographical spellings relatively often, e.g.,

[Ex-10] $\overline{\text{ḥsr}}$ / $\overline{\text{ḏrs}}$ / $\overline{\text{ḥr}}$ → $\overline{\text{ḥ}}$ “ba, manifestation,”

[Ex-11] $\overline{\text{ḥw}}$ (in $\overline{\text{ḥw}}$ / $\overline{\text{ḥwz}}$ / $\overline{\text{ḥwz}}$ “netherworld, underworld,”

[Ex-12] $\overline{\text{ḥwz}}$ / $\overline{\text{ḥr}}$ → $\overline{\text{ḥwz}}$ “slaughtering places,”

[Ex-13] $\overline{\text{ḥwz}}$ / $\overline{\text{ḥr}}$ → $\overline{\text{ḥwz}}$ (quasi-logogram) “to see.”\textsuperscript{37}

There is a tendency to omit certain phonetic complements. This is especially frequent with the phonetic complement $\overline{\text{ḥr}}$, e.g.,

[Ex-14] $\overline{\text{ḥwz}}$ → $\overline{\text{ḥwz}}$ (e.g., in $\overline{\text{ḥwz}}$, $\overline{\text{ḥwz}}$, $\overline{\text{ḥwz}}$ (e.g., in $\overline{\text{ḥwz}}$, $\overline{\text{ḥwz}}$); $\overline{\text{ḥwz}}$ → $\overline{\text{ḥwz}}$ (e.g., in $\overline{\text{ḥwz}}$); $\overline{\text{ḥwz}}$ → $\overline{\text{ḥwz}}$ (e.g., in $\overline{\text{ḥwz}}$);

Other omissions of phonetic complements are much less frequent, e.g.,

[Ex-15] $\overline{\text{ḥr}}$ → $\overline{\text{ḥr}}$ “the one in, the one in the form\textsuperscript{38} of.”

The omission of, specifically, the phonetic complement $\overline{\text{ḥr}}$, originally /R/, may reflect a reaction to the general sound changes of /R/. The $\overline{\text{ḥr}}$ might have been deleted, since its spoken correspondence has become rather weak or semi-vocalic in most cases ([ʔ] ~ [j] ~ ø).\textsuperscript{39}

\textsuperscript{35} Werning 2011, vol. 1, pp. 102f. (§6), 153f. (§§67f.).

\textsuperscript{36} References to and discussion of Leahy 1979, pp. 142, 149 in Werning 2017, p. 52, n. 35.

\textsuperscript{37} For the spellings of the lexeme $\text{ḥwz}$ in Caverns, see Werning 2011, vol. 1, tab. 31 (pp. 127–132), §§110 (pp. 182–185).

\textsuperscript{38} For the spelling “the one in the form of” (“German in Form von jemandem”) of $\text{ими}$. Cf. Werning 2011, vol. 2, p. 478.

There are, on the other hand, also two cases in which a phonetic complement is occasionally added:

[Ex-16] ỉr  → ỉr in ir.w  “form,”

[Ex-17] ḫ  → hr  “status pronominalis” “on, above.”

In plural word forms, the grammato-classifier substitutes for the w is still meant to be present), e.g., in

[Ex-18] im(i).w  →  im(i).(w) “the ones in, the ones in the form of,”

but also in

bfr.(i)w  →  bfr.(iw) “enemies” and

bfr.ww  →  bfr.(ww) “the transformations (noun).”

Besides deviations with respect to ỉ as a phonetic complement, we also find some other changes, which clearly reflect changes in the pronunciation of specific lemmata:

[Ex-19] t /c/ → /t/  “cavern, cavity, pit,”

[Ex-20] (*/R/) [R]  →  [j]  →  o  “IPL: you, your;”

[Ex-21] w /l/ [w]  →  [u]  →  o  “to lament,”

40 Note that this phonetic complement already occurs twice in the copies of the kings’ tombs (RVI, Hb. 100.9,14) and may have been spelled this way in the archetype in those two instances.

41 See footnote to Ex-15.
A special case is the following spelling change, occasionally found in TT 33:

\[\text{Ex-22} \quad \begin{array}{c}
\text{ḥf} \text{ȝ} \\
\text{ḥf} \text{ȝ}
\end{array} \rightarrow \begin{array}{c}
\text{ḥf} \text{ȝ} \\
\text{ḥf} \text{ȝ}
\end{array} \] “snake.”

Especially remarkable are the occasional hybrid spellings \( \text{ḏt} \), which reflect a sound change \(*/t̂/ > */t/ \) (de-emphatization) that happened in the early 1st millennium BCE:

\[\text{Ex-23} \quad \begin{array}{c}
\text{nḏ} \text{𓏏𓊢} \\
\text{nḏ} \text{𓏏𓊢}
\end{array} \rightarrow \begin{array}{c}
\text{n{ḏ}𓏏𓊢} \\
\text{n{ḏ}𓏏𓊢}
\end{array} \] “to care for,”

\[\text{Ex-24} \quad \begin{array}{c}
\text{ḥḏ} \text{𓇳} \\
\text{ḥḏ} \text{𓇳}
\end{array} \rightarrow \begin{array}{c}
\text{ḥ{ḏ}𓇳} \\
\text{ḥ{ḏ}𓇳}
\end{array} \] “bright” (cf. Copt. \( \text{SB} \text{ϩⲧ} \)).

Furthermore, we find a few cases of the update of lemmata:

\[\text{Ex-25} \quad \begin{array}{c}
\text{ḥ.}(w) \text{𓄹𓏥} \\
\text{ḥ.}(w) \text{𓄹𓏥}
\end{array} \rightarrow \begin{array}{c}
\text{ḥ.}(w) \text{𓄹𓏥} \\
\text{ḥ.}(w) \text{𓄹𓏥}
\end{array} \] “body,”

\[\text{Ex-26} \quad \begin{array}{c}
\text{ḥḏ.}(w) \text{𓄹𓏥} \\
\text{ḥḏ.}(w) \text{𓄹𓏥}
\end{array} \rightarrow \begin{array}{c}
\text{ḥḏ.}(w) \text{𓄹𓏥} \\
\text{ḥḏ.}(w) \text{𓄹𓏥}
\end{array} \] “matters, affairs, words.”

Above the level of individual words, we find one systematic phraseological alteration:

\[\text{Ex-27} \quad \begin{array}{c}
\text{ḥfr}(i).w \text{𓄹𓏥} \\
\text{ḥfr}(i).w \text{𓄹𓏥}
\end{array} \rightarrow \begin{array}{c}
\text{ḥfr}(i).w \text{𓄹𓏥} \\
\text{ḥfr}(i).w \text{𓄹𓏥}
\end{array} \] “enemies of Osiris” (direct genitive)

\[\rightarrow \begin{array}{c}
\text{ḥfr}(i).w \text{𓄹𓏥} \\
\text{ḥfr}(i).w \text{𓄹𓏥}
\end{array} \] “enemies of Osiris” (indirect genitive).

Another remarkable change is a frequent morpho-syntactic alteration that affects reduplicating verbal forms. The archetype of Caverns contained many such forms, specifically distributive participles (\( \text{ỉrr}(i) \) \( \text{ỉrr}.w \)), the imperfective relative form (\( \text{ỉrr}.w \)), and the imperfective

\[\text{Ex-28} \quad \begin{array}{c}
\text{ḥfr}(i).w \text{𓄹𓏥} \\
\text{ḥfr}(i).w \text{𓄹𓏥}
\end{array} \rightarrow \begin{array}{c}
\text{ḥfr}(i).w \text{𓄹𓏥} \\
\text{ḥfr}(i).w \text{𓄹𓏥}
\end{array} \] “reduplicating” verb forms (like \( \text{mrr} \)) are not to be confused with “geminating” verb forms (like \( \text{ȝmm} \)).
nominal verb form (IRR). In the copy in TT 33, many instances of these reduplicating forms have been changed to simple non-reduplicating forms:

\[ \begin{align*}
[\text{Ex-28}] & \quad \dagger \ddagger \ddagger pp \rightarrow \dagger p \ddagger \text{ “passing,”} \\
[\text{Ex-29}] & \quad \ddagger \ddagger s:qd\ddagger \rightarrow \ddagger \ddagger s:qd\ddagger \text{ “traveling,”} \\
[\text{Ex-30}] & \quad \dagger \ddagger \ddagger pr\ddagger \rightarrow \dagger \ddagger \ddagger pr\ddagger \text{ “coming forth,”} \\
[\text{Ex-31}] & \quad \ddagger \ddagger \ddagger irr \rightarrow \ddagger \ddagger \ddagger ir \text{ “doing.”}
\end{align*} \]

This is in line with observations about the fate of reduplicating verb forms in Égyptiens de tradition from the 1st millennium BCE, i.e., that they seem to die out and be replaced by other forms or constructions. Interestingly, we find that the scribes did not treat all reduplicating verb forms in the same way. They more often changed the thematic/nominal verb forms than the adjectival verb forms. Furthermore, they (still) left the stems \( \dagger \ddagger \ddagger dd\ddagger \) “giving” and \( \ddagger \ddagger \ddagger wdd\ddagger \) “putting” unchanged.

2.2.3. Changes to the images

Besides the collation of scene XXI (section 2.1) and the update of the personalized pictorial addition that was inherited from the Osireion branch (section 2.2.1), we find only a few meaningful changes in the images from TT 33. The only clear case is the substitution of the animal head of a snake with a human head in scene LIX, i.e., the “cave of Osiris” (fig. 14). We find similar human-headed snakes in two other scenes in the same tableau (scenes L and LI). In particular, scene L, the “cavern of the Mysterious (Netherworld),” which is parallel to

---

49 Werning 2011, vol. I, pp. 181f. (§109), cf. also pp. 118–121 (§29). For an evaluation of the spellings \( \dagger \ddagger \ddagger \ddagger \), \( \ddagger \ddagger \ddagger \ddagger\), and \( \ddagger \ddagger \ddagger \ddagger\), see Werning 2017, p. 55, n. 41.

51 Whether these changes are to be attributed to the early Late Period recension (copy ζ) or, more specifically, to only the copy in TT 33 cannot be determined.
scene LIX, was probably the model and inspiration. Another possible, but not indisputable,\textsuperscript{52} case is the long feathers on the back of the head of the Osirian \textit{ba}-bird in the scenes XLVI (fig. 15) and LXXVII, which makes it look more like a phoenix-bird (figs. 16 and 17).

\end{figure}

2.2.4. \textit{Textual emendations, conjectures, and additions}

Occasionally the responsible scribes seem to have felt the need to “correct” or better emend a passage by conjecture. In this section, we explore emendations that we find in TT 33, which can be attributed to the early Late Period recension (copy \(\zeta\)) and/or the tomb decoration of TT 33 (Pet).\textsuperscript{53}

Firstly, we find one obvious correction of an erroneous sign:

\begin{align*}
[\text{Ex-32}] & \text{ (}\text{Hb. 80.52, } \alpha/\beta) \\
\rightarrow & \text{ (} \text{wb} & \text{ȝ} & \text{.n} & \text{.s} \text{ “(it) has opened” (\zeta/Pet).}
\end{align*}

In context, the following erroneous flipping of signs could be identified and was corrected by the scribes of the early Late Period copy \(\zeta\):

\begin{align*}
[\text{Ex-33}] & \text{ (}\text{Hb. 1.14; } \alpha/\beta) \\
\rightarrow & \text{ (} \text{sqr} & \text{ “(your throats) may strike (?)” (\zeta).}
\end{align*}

\textsuperscript{52}\textsuperscript{52} For LXXVII, there is only one other text witness with an intact bird (RVI), so that we cannot safely attribute this change to the Late Period. In XLVI, the bird in the Osireion is largely destroyed today and the beak is curiously long (fig. 15), so that we cannot safely exclude an imprecise rendering in the publication, and, subsequently, an attribution of the feathers to the New Kingdom copy \(\beta\).

\textsuperscript{53}\textsuperscript{53} Cf. Werning 2011, vol. 1, deviation tabs. 1 (p. 333), 9 (p. 341).
Occasionally, whole words were apparently missing in the model copies. The following two cases exemplify emendation based on parallel phraseology in other parts of Caverns:

[Ex-34] $\text{Ḥr(w)} \langle \ldots \rangle \text{irw}^{\text{iii}}$ “Horus <\ldots> form” (Hb. 104.11, α)

$\rightarrow\text{Ḥr(w)} '\text{nḥ irw}^{\text{iii}}$ “Horus with living form” (ζ/Pet),

analogous to $\text{Ḥr(w)} '\text{nḥ pr.w}^{\text{iii}}$ “Horus with living transformation” (Hb. 104.10);

[Ex-35] $\langle \text{nṯr} \rangle \text{pn} '\text{ȝ} \text{𓏛}$ “The Great <God>” (Hb. 88.10, α)

$\rightarrow\text{nṯr pn} '\text{ȝ} \text{𓏛}$ “The Great God” (ζ/Pet),

as passim in Caverns.

Near the latter text, an analogous—however unnecessary$^{54}$—emendation was made:

[Ex-36] $\langle \text{nṯr} \rangle \text{pn} '\text{ḥpr} \text{sn} \text{𓏛}$ “the one who created them” (Hb. 88.24, α)

$\rightarrow\text{nṯr pn} '\text{ḥpr} \text{sn} \text{𓏛}$ “this god who created them” (ζ/Pet).

An example of another addition and a change based on parallel phraseology is the middle of the 11th great litany (Hb. 78.10–19); compare table 1. In the tomb of Ramesses VI, the 5th stanza is mistakenly left out. If—as I argued above (section 2.1)—the personalized text additions did not come from the decoration master copy (which could have included the stanza) but rather were copied from the actual tomb, the text addition that we find in TT 33 had no ancient model. It had to be invented by the Late Period scribes. Looking at the wording of the preceding and succeeding stanzas, we find that this was actually quite a simple task: the surrounding stanzas all follow the same pattern: “O Anubis, power of the west! (You) who attached the head of [various designations for Osiris].—May you (also) attach the head of NN—justified.”$^{55}$

---

54 The Égyptien de tradition of the Underworld Books exhibits a peculiar use of the singular demonstrative pronouns $\text{pn} \text{tn}$, $\text{nw} \text{tw}$, and $\text{pf} \text{tf}$. Used as determiners, they can not only follow a noun, but they may also precede a noun or a nominalized adjective; see Werning 2011, vol. 1, pp. 186–191 (§§112–119), Werning 2013, §2 (case 27).

55 However, what seems to be an apposition at the end of the addition, “May you (also) attach the head of Petamenophis—justified—, who hides his name” (cf. verse 13), is curious in two respects. I feel that its “style” is not quite in line with the style of the other personalized additions attested in Caverns. Also the spelling of $\text{ỉmn}$ with $\underline{\text{A}}$ as a logogram is untypical. I believe that both peculiarities are a hint on the Late Period origin of this addition.
Table 1. Middle of the 11th great litany (Hb. 78.10–19f) in copy β, TT 33, and the tomb of Ramesses VI.

56 For the copy in the Osireion (tO), see Frankfort 1933, pl. xl. See also n. 59.

</tbody>
</table>

For the copy in the Osireion (tO), see Frankfort 1933, pl. xl. See also n. 59.

Piankoff 1946, pl. xc–xci.
Interestingly, we also find the same text addition in the 8th stanza (verse 19)—in contrast with the addition in RVI. This, however, is seemingly a conjecture, inspired by the very probably mistakenly expanded wording of verse 19 in RVI (see the table). Note, moreover, that an obvious error in the text addition of the 4th stanza has been corrected in the process: “May you (also) attach [my] head of NN—justified” (verse 11).

Most tricky is the evidence from the 5th great litany (table 2). In the first five stanzas (Hb. 57.55–66), TT 33 seems to exhibit a wording that resembles RVI not only—as expected—in the additions but also in the verses themselves. Furthermore, we have reason to assume that the wording at least in the 3rd–5th stanzas that was copied from RVI was not the original reading of the stanzas in the archetype α, but a conjecture by scribes from the branch of the Valley of the Kings (copy γ). They are suspiciously similar (“I pass by you—[you in the netherworld!]—by my corps [in the the west/the cavern]”) and the main verses do not form complete clauses as in all the other stanzas (“and by my corps…”). Probably not coincidentally, the attestation in the Osireion seems corrupt as well. The first six stanzas all seem to lack some words at the end.

The combined evidence from the three text witnesses makes sense, I argue, if we assume that the wording was partially corrupt already in copy α, and subsequently also in copy β and in the Late Period copy ζ from the Osireion branch. Making an exception, the Late Period scribe would then have collated not only the personalized text additions, but also the wording of the main text from RVI.

58 The wording in RVI is somewhat “imbalanced,” since the ones with the power are two different deities: “(You) who has attached the head of the one who has put his power into its sarcophagus.—May you make NN powerful.” The shorter wording as we find it in the Osireion and in TT 33, i.e., in β, was most likely the original (“[You—i.e., Anubis] who has put his power into its sarcophagus.”) and the model for the royal addition (“May you make king NN—justified—powerful.”).

59 Three deviations in tO, on the other hand, may not necessarily have existed in the model copy from the Osireion branch (Hb. 78.11: hmt(3)-qrt.t-rˁ(3)-f3), 78.15: ḫfr.t−3-f3, 78.17: ḫm(3)-dw.t-f3). These deviations might have happened during the decoration of the wall of Osireion, so they have not been necessarily in the New Kingdom master copy β. Probably, they are simply lacunae.

60 Frankfort (1933, pl. XXXVI, cols. 24–29) marks the 3rd–6th stanzas, but not the 1st–2nd stanzas, as destroyed at the end. However, probably none of these stanzas is actually destroyed in the Osireion.

</table>

(Before verse 55, probably corrupted version of 65f.)

62 Frankfort 1933, pl. xxxvi.
The changes and emendations discussed above needed some kind of reflection on the part of the scribe. But still the process was in the spirit of a reproductive working mode. The scribe did not aim at creating an innovative text but at recreating a wording that he believed to be along the lines of the “authentic” original.

2.2.5. Creative textual additions

After a text that relates to the sun god standing on the hand of “The Mysterious (Netherworld)” (scenes L and LI), we find two columns of texts in TT 33 that stand out from the rest of the text, semantically and orthographically. From a text critical point of view, we cannot say whether these columns are secondary or not, since the whole text block did not survive in any text witness other than TT 33. However, the peculiarities are telling, I believe. The text starts “In this very form is this god (i.e., Ra). The God gives Osiris his hands and illuminates him” (Hb. 60.31–33). It continues:

[Ex-37] Hb. 60.34–35Z

\[\text{In this very form is this god (i.e., Ra). The God gives Osiris his hands and illuminates him}.\]

First of all, this information does not fit the context. The word “husband” does not occur in Caverns, apart from here. And the elaborate classifier group in ḫȝp𓀱𓂡 is unusual, as is the logographic spelling ofỉmn with𓀱 (Hieroglyphica no. A5A). Moreover, passive forms of the suffix conjugation are quite rare in Caverns. Altogether, it seems to me that this is an accidental addition in the course of the Late Period recension, rather than a creative addition.

On the other hand, an “intrusive” text block above the initial scene II (see figure 13 above) is clearly a creative addition (see Werning forthcoming). It is partially inspired by and composed with the help of the beginning of Caverns (Hb. 1–2), including a verbatim quote of the very first phrases of Caverns, quotes augmented with some additional phrases, as well as compilations and rephrasings of pieces from model sentences. Introducing Petamenophis, it was probably specifically created for his tomb.

---

66 Werning 2011, vol. 1, pp. 166f. For an alternative interpretation as resultatives (“p[t]” “hȝp𓀱𓂡.t(ỉ) ỉmr[ỉ]” “hy[Ỉ]...[Ỉ]”) “The s[ky] (?) is veiled, Osiris is hidden[ed], the husband [Ỉ...[Ỉ]”), the position of the t after the classifiers of ḫȝp𓀱aternity would be unusual, and the t behind ỉmn would be superfluous after the masculine word “Osiris.”
3. DISTRIBUTION OF Caverns IN THE ROOMS XVII–XIX

As mentioned in the introduction, Caverns has to be imagined as a long papyrus with seven large image tableaus and long text blocks between them (fig. 18).

It was surely by means of such a papyrus that the decoration in TT 33 was planned. While the other two (nearly) complete copies in the tomb of Ramesses VI and in the Osireion were executed, basically, linearly along a sequence of walls on only one side of a corridor,\(^{67}\) the copy in TT 33 is distributed over both sides of a sequence of rooms, thereby splits into two sequences of walls (nos. 1–6 and 7–13, see figure 19).

The first sequence starts on the west wall of room XVII and goes along the south and rightmost east walls of this room and the south walls of the following corridor XVIII and room XIX. It bears approximately the first half of Caverns up to the 4th tableau (\(Hb.\) 1–56). The second sequence starts from the east wall of, again, room XVII and goes along the north wall

\(^{67}\) Cf. Werning 2011, vol. 1, fig. 2 (p. 15), fig. 11 (p. 30).
of the corridor and the west and north walls of room XIX (Hb. 57ff.). The only wall that is not decorated with parts of Caverns is the east wall of room XIX. It is decorated with the “Awakening of Osiris” and a door decoration with an offering scene.

3.1. Reading direction and orientation

The reading direction of texts and figures is from right to left on the first sequence of walls, but from left to right on the second sequence. The latter orientation is the one that we have to assume for the archetype of Caverns and for the Osireion branch of the transmission, i.e., the first source of Caverns in the Late Period (see section 2.1 above). The orientation of the first sequence, on the other hand, is the same as in RVI, i.e., the second source of Caverns in TT 33. However, in contrast with the case of RVI, TT 33 does not exhibit any clear case of an orientation change compared with the reconstructed archetype and the Osireion copy.

First of all, the resulting reading direction is in line with the direction in nearly all the other text witnesses of Caverns on tomb/temple walls, namely towards the inside. Furthermore, however, the result is that one starts to read Caverns on the westernmost wall, reads eastwards (on all west-east oriented walls; in various ways on south-north oriented walls) and ends on the north-eastern corner of the sequence of rooms. Apart from the somewhat inevitable return from room XIX to room XVII after the first half of the book, this reading sequence from west to east is obviously in line with the general orientation of the journey of the sun god through the underworld as described in this very book, i.e., from the western horizon to the eastern horizon.

3.2. Layout of text blocks and image tableaus on the walls

Generally, the text and tableaus were arranged on the walls as they were on the original papyrus version of Caverns (and in the Osireion). However, the ceiling of the third room XIX was considerably higher than the one in the other two rooms, so that, keeping roughly the same scale as in the other rooms, more space was available on these walls. In this higher room, the image tableaus were placed in the lower part of the walls, whereas the upper parts were filled with the texts from text blocks between the tableaus (fig. 20). On all three walls, these text blocks are to be read before the registers below them (e.g., no. 7 before 8/9 on the south wall).

68 Following Dümichen’s map, Piankoff 1947, pp. 86f. (map on p. 75) erroneously indicates that Caverns starts on the southern wall. Traunecker 2008, p. 36 describes the sequence basically correctly. However, his description is based on an older appointment of certain parts of Caverns to certain sections, revised in Werning 2011, vol. 1, pp. 5–8: “début IV” = first part of section “Litanies 1–3,” “section V” in XVII = section “Litanies 4–6”; “Litanies 7–20” which indeed belong to “section V” further extent into room XIX, west/north.

69 This copy could not yet become included in Roberson 2013.

70 Werning 2011, vol. 1, p. 74.

71 Clear cases of an orientation change in RVI are the scenes XXI (fig. 5 above) and LXIII. Further possible cases are the cases of the scenes XXVII, XXXII (lower register), and XXXIII. Cf. Werning 2011, vol. 1, p. 74.

72 See Werning 2011, vol. 1, ch. II, figs. 2, 7–8, 11–16. A notable exception is the opposite reading direction on the north wall of the 3rd corridor in the tomb of Ramesses IV (op. cit., fig. 8).
Interestingly, the west and north walls in room XIX are to be considered one common decoration space. The text blocks in the uppermost registers of both walls are to be read in one go (nos. 13–14). Similarly in the lower register: the 6th tableau goes around the corner of both walls as if the corner didn’t exist (no. 15). It is followed by a text block of the 21st great litany on the same level (no. 16). Somewhat special, however, the final sunrise tableau (no. 17) is placed between the text block in the upper(most) text register and the lower(most) tableau register.

73 A comparable, but not similar solution has been chosen for the tomb of Ramesses VI. The sunrise tableau has been inserted into the upper register of the preceding 6th tableau—to the expense of the scene LXV, which—as also the final of all three registers—was displaced to a pillar (see Piankoff, Rambova 1954, vol. 1, figs. 20, 21).
4. SUMMARY

The Book of Caverns in TT 33 is one of the few (almost) complete copies of this Underworld Book. It is the result of a collation of two copies of Caverns in the early Late Period (section 2.1). One source is related to the copy in the Osireion, and the other one comes from the tomb of Ramesses VI, very probably a copy of the actual walls of the finished monument. While the core text comes from the Osireion branch, it was the personalized text additions for the king that interested the ancient redactors the most in the copy from the Valley of the Kings. Naturally, they replaced the names and titles of the king with those of Petamenophis. In the case of the images, we see that the scribe eventually compared both model copies and created a merged version. A single pictorial addition of the king behind Ra from the Osireion branch was replaced with an image of Petamenophis (section 2.2.1).

In the context of the reception in the Late Period, the scribes also made some changes to spellings, lexemes, phrases, and verbal reduplication morphology (section 2.2.2). However, these did not actually change the intellectual content of the book. Some partially creative emendations were also made based on parallel phraseology, in order to fill obvious or apparent gaps in the attestation. Probably in the same spirit, the head of a snake was changed in one scene in accordance with a snake’s head in a parallel scene (section 2.2.3). The aim of all these activities was obviously to create an “authentic” copy of Caverns, with additions to the benefit of a deceased. Apart from this, there is one indisputable case and two possible, though disputable, cases of creative additions in the course of the Late Period redaction. A text block above the initial scene II is clearly an intentional creative addition, probably specifically composed for this tomb (Werning forthcoming). On the other hand, two strange columns of texts between the scenes L and LI are probably accidental additions (section 2.2.5). Another change that seems to date to the early Late Period is the addition of some feathers to the back of the head of the Osirian ba-bird, which makes it look more like a phoenix-bird (section 2.2.1).

The copy of Caverns was distributed over a sequence of three rooms, XVII–XIX (section 3). It was directed into the interior of the tomb, towards the burial chamber. Moreover, it starts on the westernmost wall of the first room and ends in the north-eastern corner of the third room, thereby mirroring the journey of the sun god—and with him Petamenophis (fig. 13)—through the netherworld.

ACKNOWLEDGEMENTS

The figures 4, 6, 8b, 9b, 10b, 13, 14, 16 and 17 in this contribution are among the first published outcome of the author’s epigraphic work on the Book of Caverns in the Theban Tomb 33 between 2012 and 2018, as part of the IFAO Mission épiographique française dans la tombe de Padiaménopé, directed by Prof. Dr. Claude Traunecker (Université de Strasbourg) and co-director Dr. Isabelle Régen (Université Paul-Valéry Montpellier 3).74 I am indeed very grateful...
for the invitation to work on this text, the support consisting of logistics and workmen-power, as well as the warmly welcome to the team. I also have to thank the Excellence Cluster 264 “Topoi” for the financial support of my work, travel, and equipment, as well as for the granting of twelve months of help by a student assistant, namely Antonio Cantele, who produced most of the line drawings for me.
